Atmospheric Science Second Edition An Introductory Survey International Geophysics:

Atmospheric Science John Michael Wallace, 2006 Wallace and Hobbs original edition of Atmospheric Science helped define the field nearly 30 years ago and has served as the cornerstone for most university curriculums. Now students and professionals alike can use this updated classic to understand atmospheric phenomena in the context of the latest discoveries and technologies and prepare themselves for more advanced study and real life problem solving. Atmospheric Science Second Edition has been completely revamped in terms of content and appearance. It contains new chapters on atmospheric chemistry, the Earth system, climate, and the atmospheric boundary layer, as well as enhanced treatment of atmospheric dynamics, weather forecasting, radiative transfer, severe storms, and human impacts such as global warming. The authors illustrate concepts with colorful state of the art imagery and cover a vast amount of new information in the field. They have also developed several online materials for instructors who adopt the text. With its thorough coverage of the fundamentals, clear explanations, and extensive updates, Wallace Hobbs Atmospheric Science Second Edition is the essential first step in educating today's atmospheric scientists. Full color satellite imagery and cloud photographs illustrate principles throughout. Extensive numerical and qualitative exercises emphasize the application of basic physical principles to problems in the atmospheric sciences. Biographical footnotes summarize the lives and work of scientists mentioned in the text and provide students with a sense of the long history of meteorology. Companion website encourages more advanced exploration of text topics, supplementary information, images, and bonus exercises.

Alpine Archaeology

Patrick Hunt, 2007 Patrick Hunt's Alpine Archaeology is born out of more than a decade of widespread high altitude archaeological field research in the Alps. The observations in this research study were made over time in a number of different field seasons and therefore gradually built up over the years. The author conducted this study while directing the Stanford Alpine Archaeological Project. Alpine archaeology is a specialized field where normal archaeological principles such as stratigraphy, pedology, data recording, anthropogenic features, materials analyses etc. apply but where contextual and climatic conditions are considerably unique. Higher altitudes and cold climate impact archaeological research and its practice in many different ways and influence the survival and preservation of both organic substances and metal objects as less oxidation and lower diffusion rates in the alpine environment noticeably inhibit the decomposition and corrosion of artifactual material. While observations in the first part of the book have been derived mostly from fieldwork in the Grand St Bernard region, those discussed in the second part are derived from the Stanford Alpine Archaeology Project's most important ongoing research which is focused on attempting to trace Hannibal's route over the Alps in 218 BCE. Hunt completed his PhD in Archaeology from the Institute of Archaeology, University of London in 1991. He is on the Classics and Archaeology faculty at Stanford University where he has been Director of the Stanford Alpine Archaeology Project since 1994. His Hannibal research is sponsored by the National Geographic Society with a grant from their Expedition Council for 2007-2008.
