theological reflection has always considered inspiration and truth as two key concepts for an ecclesial hermeneutic of the sacred Scriptures and that there is today the need for a fuller and more adequate study of these realities in order to better respond to the need of interpreting the sacred texts in accordance with their nature

The Inspiration and Truth of Sacred Scripture

The Word That Comes from God and Speaks of God for the Salvation of the World is the contribution of the Pontifical Biblical Commission toward a more adequate understanding of the concepts of inspiration and truth that respects both the nature of the Bible and its significance for the life of the Church

Drawing on a close reading of the Scriptures themselves the document focuses on three main aspects

- 1 The inspiration of Sacred Scripture and the exploration of its divine provenance
- 2 The truth of the Word of God emphasizing the message about God and his project of salvation
- 3 Challenges that arise from the Bible itself on account of certain aspects that seem inconsistent with its quality of being the Word of God

Reading this document formally approved by Pope Francis will strengthen the reader to receive the word of God in the liturgical assembly and in every other place in its theological Christological soteriological and ecclesiological context in a way that corresponds ever more closely to this unique gift of God whereby God communicates his very self and invites us into communion with him

Cross-Modal Learning: Adaptivity, Prediction and Interaction Jianwei Zhang, Stefan Wermter, Fuchun Sun, Changshui Zhang, Andreas K. Engel, Brigitte Röder, Xiaolan Fu, Gui Xue, 2023-02-02 The purpose of this Research Topic is to reflect and discuss links between neuroscience psychology computer science and robotics with regards to the topic of cross modal learning which has in recent years emerged as a new

area of interdisciplinary research The term cross modal learning refers to the synergistic synthesis of information from multiple sensory modalities such that the learning that occurs within any individual sensory modality can be enhanced with information from one or more other modalities Cross modal learning is a crucial component of adaptive behavior in a continuously changing world and examples are ubiquitous such as learning to grasp and manipulate objects learning to walk learning to read and write learning to understand language and its referents etc In all these examples visual auditory somatosensory or other modalities have to be integrated and learning must be cross modal In fact the broad range of acquired human skills are cross modal and many of the most advanced human capabilities such as those involved in social cognition require learning from the richest combinations of cross modal information In contrast even the very best systems in Artificial Intelligence AI and robotics have taken only tiny steps in this direction Building a system that composes a global perspective from multiple distinct sources types of data and sensory modalities is a grand challenge of AI yet it is specific enough that it can be studied quite rigorously and in such detail that the prospect for deep insights into these mechanisms is quite plausible in the near term Cross modal learning is a broad interdisciplinary topic that has not yet coalesced into a single unified field Instead there are many separate fields each tackling the concerns of cross modal learning from its own perspective with currently little overlap We anticipate an accelerating trend towards integration of these areas and we intend to contribute to that integration By focusing on cross modal learning the proposed Research Topic can bring together recent progress in artificial intelligence robotics psychology and neuroscience The Bible Companion ,1985 *The History of the World, in Five Books* Sir Walter Raleigh,1687
