Structures Under Shock and Impact XII G. Schleyer, C. A. Brebbia, 2013 Of interest to engineers from civil military nuclear offshore aeronautical transportation and other backgrounds this book contains the proceedings of a well established conference on the subject that was first held in 1989 Topics covered include Impact and Blast Loading Characteristics Protection of Structures from Blast Loads Energy Absorbing Issues Structural Crashworthiness Hazard Mitigation and Assessment Behaviour of Steel Structures Behaviour of Structural Concrete Material Response to High Rate Loading Seismic Engineering Applications Interaction Between Computational and Experimental Results Innovative Materials and Material Systems Fluid Structure Interaction The shock and impact behaviour of structures presents challenges to researchers not only because it has obvious time dependent aspects but also because it is difficult to specify the external dynamic loading characteristics and to obtain the full dynamic properties of materials It is crucial that we find ways to share the contributions and understanding that are developing from various theoretical numerical and experimental studies as well as investigations into material properties under dynamic loading conditions This book helps to meet that need
