# Rational Functions

Rational functions or algebraic fractions are functions that are fractions because they have a numerator and denominator. Rational functions are expressed as the ratio of two polynomials such that the denominator is not equal to 0.

$$R(x) = \frac{p(x)}{q(x)} \quad \text{where } q(x) \neq 0.$$

Here are the three types of rational functions and the graph of the functions:

Degree of the numerator is < Degree of the denominator	Degree of the numerator is = Degree of the denominator	Degree of the numerator is > Degree of the denominator
$f(x) = \dfrac{3}{x}$	$f(x) = \dfrac{x+1}{x-4}$	$f(x) = \dfrac{x^2-1}{x}$

Iteration Of Rational Functions:

　　Iteration of Rational Functions Alan F. Beardon,2000-10-11 This book focuses on complex analytic dynamics which dates from 1916 and is currently attracting considerable interest The text provides a comprehensive well organized treatment of the foundations of the theory of iteration of rational functions of a complex variable The coverage extends from early memoirs of Fatou and Julia to important recent results and methods of Sullivan and Shishikura Many details of the proofs have not appeared in print before　　*Rational Iteration* Norbert Steinmetz,1993 The series is devoted to the publication of monographs and high level textbooks in mathematics mathematical methods and their applications Apart from covering important areas of current interest a major aim is to make topics of an interdisciplinary nature accessible to the non specialist The works in this series are addressed to advanced students and researchers in mathematics and theoretical physics In addition it can serve as a guide for lectures and seminars on a graduate level The series de Gruyter Studies in Mathematics was founded ca 35 years ago by the late Professor Heinz Bauer and Professor Peter Gabriel with the aim to establish a series of monographs and textbooks of high standard written by scholars with an international reputation presenting current fields of research in pure and applied mathematics While the editorial board of the Studies has changed with the years the aspirations of the Studies are unchanged In times of rapid growth of mathematical knowledge carefully written monographs and textbooks written by experts are needed more than ever not least to pave the way for the next generation of mathematicians In this sense the editorial board and the publisher of the Studies are devoted to continue the Studies as a service to the mathematical community Please submit any book proposals to Niels Jacob Titles in planning include Flavia Smarazzo and Alberto Tesei Measure Theory Radon Measures Young Measures and Applications to Parabolic Problems 2019 Elena Cordero and Luigi Rodino Time Frequency Analysis of Operators 2019 Mark M Meerschaert Alla Sikorskii and Mohsen Zayernouri Stochastic and Computational Models for Fractional Calculus second edition 2020 Mariusz Lema czyk Ergodic Theory Spectral Theory Joinings and Their Applications 2020 Marco Abate Holomorphic Dynamics on Hyperbolic Complex Manifolds 2021 Miroslava Antic Joeri Van der Veken and Luc Vrancken Differential Geometry of Submanifolds Submanifolds of Almost Complex Spaces and Almost Product Spaces 2021 Kai Liu Ilpo Laine and Lianzhong Yang Complex Differential Difference Equations 2021 Rajendra Vasant Gurjar Kayo Masuda and Masayoshi Miyanishi Affine Space Fibrations 2022　　On the Iteration of Rational Functions Joseph Fels Ritt,1920*　　**Iteration of Rational Functions of One Complex Variable and Basins of Attractive Fixed Points** Gregg Willard Saunders,1984　　**Random Iteration of Rational Functions** David Simmons,2012　　**The Iteration of Rational Functions and Their Julian Sets** Chrystina M. Howard,1994　　**Random Iteration of Rational Functions** Simmons David,2014-01 The goal of this book is to study the ergodic theory of holomorphic random dynamical systems on the Riemann sphere Specifically the main results are two generalizations of a theorem of Denker and Urba ski 91 concerning existence and uniqueness of equilibrium states of

rational functions with respect to Holder continuous potential functions satisfying a pressure gap condition The main results also generalize a theorem of Jonsson 00   *Invariant Sets Under Iteration of Rational Functions* Hans Brolin,1965

Dynamics of Entire Functions Cándido Piñeiro,2025-04-21 There are very few systematic books on the dynamics of entire functions Unfortunately reading these books is often difficult for non specialists since their proofs are not clearly written and readers struggle to understand the arguments fully This book is a comprehensive introduction to the iteration theory of entire complex functions It is intended to introduce the reader to the key topics in the field and to form a basis for further study In general the proofs are more detailed therefore the book will also help non specialist mathematicians become acquainted with complex dynamics In no sense is this manuscript a complete account of the subject Nevertheless the book may also be helpful to young researchers in this field before they tackle more specific works The book deals with three possible aspects theory practice and computer graphics In Appendix C we explained the necessary rudiments of MATLAB RGB images to create computer graphics of different sets considered in the book such as the sets of Julia and Mandelbrot In this Appendix a gallery is also included where beautiful and spectacular images are shown The author has obtained all these images using MATLAB most of which are revealed here for the first time   Early Days in Complex Dynamics Daniel S. Alexander,Felice Iavernaro,Alessandro Rosa,2012 The theory of complex dynamics whose roots lie in 19th century studies of the iteration of complex function conducted by Koenigs Schoder and others flourished remarkably during the first half of the 20th century when many of the central ideas and techniques of the subject developed This book paints a robust picture of the field of complex dynamics between 1906 and 1942 through detailed discussions of the work of Fatou Julia Siegel and several others   *Newton's Method and Dynamical Systems* H.-O. Peitgen,2012-12-06   Analytic Endomorphisms of the Riemann Sphere Mariusz Urbański,Mario Roy,Sara Munday,2023-09-05 Complex dynamics is one of the most fascinating subjects of study and research in mathematics This third volume in the series entitled Non Invertible Dynamical Systems not only examines topological and analytical properties of the iteration of rational functions on the Riemann sphere in particular the Fatou and Julia sets but also focuses on thermodynamic ergodic and fractal properties of these functions notably equilibrium states Bowen s formula and Sullivan s conformal measures This volume builds on the first two volumes in the series while simultaneously developing some methods and techniques specific to rational functions   **Polynomial Root-finding and Polynomiography** Bahman Kalantari,2009 This book offers fascinating and modern perspectives into the theory and practice of the historical subject of polynomial root finding rejuvenating the field via polynomiography a creative and novel computer visualization that renders spectacular images of a polynomial equation Polynomiography will not only pave the way for new applications of polynomials in science and mathematics but also in art and education The book presents a thorough development of the basic family arguably the most fundamental family of iteration functions deriving many surprising and novel theoretical and practical applications such as algorithms for approximation of roots of polynomials and analytic

functions polynomiography bounds on zeros of polynomials formulas for the approximation of Pi and characterizations or visualizations associated with a homogeneous linear recurrence relation These discoveries and a set of beautiful images that provide new visions even of the well known polynomials and recurrences are the makeup of a very desirable book This book is a must for mathematicians scientists advanced undergraduates and graduates but is also for anyone with an appreciation for the connections between a fantastically creative art form and its ancient mathematical foundations **Topics in Complex Analysis** Joel L. Schiff,2022-10-24 Complex analysis is found in many areas of applied mathematics from fluid mechanics thermodynamics signal processing control theory mechanical and electrical engineering to quantum mechanics among others And of course it is a fundamental branch of pure mathematics The coverage in this text includes advanced topics that are not always considered in more elementary texts These topics include a detailed treatment of univalent functions harmonic functions subharmonic and superharmonic functions Nevanlinna theory normal families hyperbolic geometry iteration of rational functions and analytic number theory As well the text includes in depth discussions of the Dirichlet Problem Green s function Riemann Hypothesis and the Laplace transform Some beautiful color illustrations supplement the text of this most elegant subject Dynamics on the Riemann Sphere Bodil Branner,2006 Dynamics on the Riemann Sphere presents a collection of original research articles by leading experts in the area of holomorphic dynamics These papers arose from the symposium Dynamics in the Complex Plane held on the occasion of the 60th birthday of Bodil Branner Topics covered range from Lattes maps to cubic polynomials over rational maps with Sierpinsky Carpets and Gaskets as Julia sets as well as rational and entire transcendental maps with Herman rings *Fractal Geometry and Applications: A Jubilee of Benoit Mandelbrot* Michel Laurent Lapidus,Machiel Van Frankenhuysen,2004 This volume offers an excellent selection of cutting edge articles about fractal geometry covering the great breadth of mathematics and related areas touched by this subject Included are rich survey articles and fine expository papers The high quality contributions to the volume by well known researchers including two articles by Mandelbrot provide a solid cross section of recent research representing the richness and variety of contemporary advances in and around fractal geometry In demonstrating the vitality and diversity of the field this book will motivate further investigation into the many open problems and inspire future research directions It is suitable for graduate students and researchers interested in fractal geometry and its applications This is a two part volume Part 1 covers analysis number theory and dynamical systems Part 2 multifractals probability and statistical mechanics and applications **Complex Analysis and Dynamics in One Variable with Applications** Luis T. Magalhães,2025-05-26 This textbook has been designed to support the initial study of Complex Analysis progressing to Complex Dynamics It focuses on the fundamental aspects of one variable complex functions covering the geometric theory and dynamics of iterations of rational mappings Following the standard material the book delves into an extensive range of advanced topics encompassing the requirements for a one year graduate level course or a preliminary exam In this work the

reader will discover three distinctive characteristics it simplifies and unifies ideas and concepts that might appear disparate or complicated in real analysis it contributes to the development of other areas in mathematics and it showcases relevance for applications in Science and Engineering with many exercises Historical notes throughout the text help to contextualize the theory With its flexible structure this textbook provides a solid foundation for a first course in Complex Analysis and for a second more advanced course establishing a robust basis for subsequent studies   Meromorphic Dynamics: Volume 2 Janina Kotus,Mariusz Urbański,2023-05-04 This text the second of two volumes builds on the foundational material on ergodic theory and geometric measure theory provided in Volume I and applies all the techniques discussed to describe the beautiful and rich dynamics of elliptic functions The text begins with an introduction to topological dynamics of transcendental meromorphic functions before progressing to elliptic functions discussing at length their classical properties measurable dynamics and fractal geometry The authors then look in depth at compactly non recurrent elliptic functions Much of this material is appearing for the first time in book or paper form Both senior and junior researchers working in ergodic theory and dynamical systems will appreciate what is sure to be an indispensable reference   *Holomorphic Dynamics* S. Morosawa,2000-01-13 This book first published in 2000 is a comprehensive introduction to holomorphic dynamics that is the dynamics induced by the iteration of various analytic maps in complex number spaces This has been the focus of much attention in recent years with for example the discovery of the Mandelbrot set and work on chaotic behaviour of quadratic maps The treatment is mathematically unified emphasizing the substantial role played by classical complex analysis in understanding holomorphic dynamics as well as giving an up to date coverage of the modern theory The authors cover entire functions Kleinian groups and polynomial automorphisms of several complex variables such as complex Henon maps as well as the case of rational functions The book will be welcomed by graduate students and professionals in pure mathematics and science who seek a reasonably self contained introduction to this exciting area   *Transactions of the ... Army Conference on Applied Mathematics and Computing* ,1986
