*Convergence and Divergence of European Languages* P. Sture Ureland,2003 Papers from the Second International Symposium of Eurolinguistics held in Pushkin Russia Sept 10 16 1999    **Corpus-based Analysis and Diachronic Linguistics**

Yuji Kawaguchi,Makoto Minegishi,Wolfgang Viereck,2011 Nowadays linguists do not question the existence of synchronic variation and the dichotomy between synchrony and diachrony They recognize that synchrony can be motivated regionally diatopic variation sociolinguistically diastratic variation or stylistically diaphasic variation But further they can also recognize the hybrid nature of synchrony which is referred to as dynamic synchrony This conception of synchrony assumes that similar patterns of usage can coexist in a community during a certain period and that their mutual relations are not static but conflicting enough to result in a future systematic change through symptomatic synchronic variation Emergence of a large corpus of written texts for some languages has enabled quantitative as well as qualitative analyses of the synchronic conditions for diachronic changes over both long and short spans of time Most of the 14 papers in this volume represent studies on synchronic and diachronic variations based on such corpus data For sale in all countries except Japan For customers in Japan please contact Yushodo Co

**Current Approaches to Limits and Areas in Dialectology** Xosé Álvarez, Ernestina Carrilho, Catarina Magro, 2013-09-17 Defining the geographical space of linguistic variation and drawing the areal distribution of linguistic variants are classical issues in dialectology Over recent decades advances in geolinguistic methods along with new trends in the study of linguistic variation have significantly shaped new ways of approaching limits and areas in dialectology This volume is at the crossroads of recent methodological and conceptual developments in dialectology and brings together contributions offering an unusual panorama of case studies from Basque Romance Germanic Celtic and Slavic languages The seventeen chapters in this volume address a wide spectrum of issues exploring new approaches to the interplay of dialect areas and time and society Part I current quantitative methods of studying dialect limits Part II and linguistic geovariation focused on lexical prosodic syntactic or morphosyntactic topics Part III One of the unique features of the volume is the important collection of contributions addressing issues of dialect syntax a recent and rapidly growing field of linguistic research

**Color Language and Color Categorization** Jonathan Brindle, Geda Paulsen, Mari Uusküla, 2016-08-17 This volume represents a unique collection of chapters on the way in which color is categorized and named in a number of languages Although color research has been a topic of focus for researchers for decades the contributions here show that many aspects of color language and categorization are as yet unexplored and that current theories and methodologies which investigate color language are still evolving Some core questions addressed here include How is color conceptualized through language What kind of linguistic tools do languages use to describe color Which factors tend to bias color language What methodologies could be used to understand human color categorization and language better How do color vocabularies evolve How does context impact the color cognition The chapters collected here adopt different theoretical and methodological approaches in describing new empirical research on how the concept of color is represented in a variety of different languages Researchers in linguistics psychology and cognitive science present a set of new explorations and challenges in the area of color language The book promotes several methodological and disciplinary dimensions to color studies The color category is given an in depth and broad based examination so a reader interested in color conceptualization for itself will be able to form a solid vision of the subject

**Language Mapping** Jürgen Erich Schmidt, 2011-03-30 The Handbook of Language Mapping aims to explore the core methodological and theoretical approaches of linguistic cartography In both empirical and theoretical linguistics the spatial variation of language is of increasing interest and the visualization of language in space is therefore also of growing significance It is the precondition for correct data

interpretation But how does it work What has to be considered when drawing a map And how has the problem been tackled so far This book provides answers to such questions by taking a closer look at the theoretical issues surrounding cartography and at the concrete practice of mapping The fundamental issues raised are addressed particularly well since linguistic geography is not only one of the domains with a lengthy tradition it is also one of the most progressive fields in linguistics At the same time because of their visual primacy linguistic maps directly confront the challenges of human perception and aesthetics In this context envisioning the fruits of language mapping is a fascinating and inspiring endeavor not just for experts With its accessible texts and wealth of full color images the handbook not only represents a comprehensive manual serving the interests of a variety of readers it also fills a gap in the ongoing linguistic discourse
