Practices in Teaching Information Sciences and Technology John M. Carroll, 2024-08-13 Information Sciences and Technology. IST is a rapidly developing interdisciplinary area of university research and educational programs. It encompasses artificial intelligence, data science, human-computer interaction, security, and privacy, and social informatics. In both research and teaching, IST ambitiously addresses interdisciplinary synergies across this broad foundation. Many articles and books discuss innovative research practices in IST, but innovations in teaching practices are less systematically shared. Although new programs and new faculty join IST each year, they basically have only their own imaginations to draw upon in developing effective and appropriate innovative teaching practices. This book presents essays by experienced faculty instructors in IST describing insights that emerged from teaching and learning classroom practice and that have been validated through classroom experience. The book is intended to help develop and strengthen a community of practice for innovative teaching in IST. The Drosophila Model in Cancer Wu-Min Deng, Cayetano González, 2025-09-01 This volume brings together a series of review articles that highlight new advances in using the fruit fly *Drosophila melanogaster* to study a wide range of cancer-related topics. Building on the foundation of Volume I, the articles demonstrate how research in *Drosophila* continues to uncover important developmental, cellular, and molecular mechanisms underlying tumor growth, progression, and systemic interactions. Readers will appreciate how the fly's simple genetics and powerful experimental tools make it a flexible and effective model for studying cancer. *Drosophila* offers unique opportunities to answer key questions about how uncontrolled cell proliferation begins and progresses into cancer, questions that can be very difficult to explore in other systems. This book is a valuable resource for researchers interested in using the *Drosophila*

model to better understand cancer biology and to help find new strategies to combat this disease **Artificial Intelligence and Evolutionary Computations in Engineering Systems** S. Brassica Breeding and Biotechnology A. K. M. Aminul Islam,Mohammad Anwar Hossain,A. K. M. Mominul Islam,2021-07-07 The family Brassicaceae constitutes one of the world s most economically important plant groups These plants are important sources of vegetable oil vegetables and condiments Most of these crops belong to the genus Brassica which includes common crops such as oilseeds oilseed rape mustard and vegetables broccoli cauliflower brussels sprouts cabbage turnip Chinese cabbage etc Brassica species play an essential role in horticulture and agriculture as well as contribute to the health of populations around the world The current global climatic model predicts a significant decrease in growth yield and productivity of Brassica due to various biotic and abiotic stress factors Thus high yielding climate resilient and disease resistant Brassica varieties are required to maintain as well as increase future agricultural production The development of improved cultivars of these crops may become exhausted and improvement could become stagnant when plant breeding is merely based on a single breeding approach Therefore the goal of a breeding program should be to develop genetically superior Brassica cultivars suitable for a wide range of environments This book examines the introgression of insect and disease resistance and other desirable traits into Brassica

crops using inter and or intra specific hybridization as well as biotechnological and molecular techniques which could be useful for improving Brassica crops to ensure food security
