The Charles Darwin Collection Charles Darwin, 2020-09-15 These three major works by the father of evolutionary theory encompass his life journey through the Galapagos and landmark work on natural selection On the Origin of Species In one of the most important contributions to scientific knowledge Charles Darwin puts forth the theory that species evolve over time through the process of natural selection Drawn from extensive research performed on various creatures living in the Galapagos Islands his research suggests that one species does change into another a revolutionary notion that has shaped much of modern biology The Autobiography of Charles Darwin Darwin wrote his autobiography as a family document in 1876 When it was originally published posthumously certain portions were considered too personal or controversial and were removed This edition restores those passages shedding light on the women in Darwin s life and his evolving views on religion It also includes previously unpublished notes and letters on family matters as well as Darwin s dispute with Samuel Butler The Voyage of the Beagle From volcanoes in the Galapagos to the coral reefs of Australia this travelogue documents the young naturalist s historic years long journey at sea Darwin s observations of the people places and events he experienced make for compelling reading and offer a fascinating window into the intellectual development of his ideas about natural selection

The Voyage of the Beagle Charles Darwin, 2017-07-11 When the Beagle sailed out of Devonport on 27 December 1831 Charles Darwin was twenty two and setting off on the voyage of a lifetime It was to last five years and transform him from an amiable and somewhat aimless young man into a scientific celebrity Even more vitally it was to set in motion the intellectual currents that culminated in the arrival of The Origin of Species in Victorian drawing rooms in 1859 His journal is vivid and immediate showing us a naturalist making patient observations above all in geology As well as a profusion of natural history detail it records many other things that caught Darwin s eye from civil war in Argentina to the new colonial settlements of Australia Charles Robert Darwin was an English naturalist who realised and presented compelling evidence that all species of life have evolved over time from common ancestors through the process he called natural selection His 1859 book On the Origin of

Species established evolutionary descent with modification as the dominant scientific explanation of diversification in nature. He examined human evolution and sexual selection in *The Descent of Man and Selection in Relation to Sex* followed by *The Expression of the Emotions in Man and Animals*. His research on plants was published in a series of books and in his final book he examined earthworms and their effect on soil.

After having been twice driven back by heavy south-western gales, Her Majesty's ship Beagle, a ten-gun brig under the command of Captain Fitz Roy, R.N., sailed from Devonport on the 27th of December 1831. The object of the expedition was to complete the survey of Patagonia and Tierra del Fuego, commenced under Captain King in 1826 to 1830, to survey the shores of Chile, Peru, and of some islands in the Pacific, and to carry a chain of chronometrical measurements round the World. On the 6th of January we reached Teneriffe, but were prevented landing by fears of our bringing the cholera. The next morning we saw the sun rise behind the rugged outline of the Grand Canary Island, and suddenly illumine the Peak of Teneriffe, whilst the lower parts were veiled in fleecy clouds. This was the first of many delightful days never to be forgotten. On the 16th of January 1832 we anchored at Porto Praya, in St. Jago, the chief island of the Cape de Verde archipelago.
