Comparative Reservoir Limnology and Water Quality Management M. Straskraba, J.G. Tundisi, A. Duncan, 2013-03-09. The volume starts with comparative reservoir limnology and deals with problems relating to tropical, semi-arid, and temperate reservoirs. The second part concerns mathematical models of reservoirs, including new techniques for investigating their limnology. These cover physical, chemical, and biological phenomena, remote sensing, and the use of modelling to establish the most efficient strategy for water quality sampling. In the third, on reservoir water quality management, the potential available in fish population management for biomanipulation of reservoir water quality is introduced. Also included is a valuable section on a wide range of water quality measures coming from the well-known Czech Hydrobiological Laboratory. Finally, the editors summarise the present state of reservoir limnology. This book will be of interest to hydrobiologists and aquatic ecologists, reservoir and sanitary engineers, fisheries officers, postgraduate teaching, and the water industry dealing with drinking water supply, and will provide insight into regulated rivers. It draws information from all over the world and is relevant to the whole world.
