Closure Jacqueline Saw, Saibal Kar, Matthew J. Price, 2015-11-09 Percutaneous left atrial appendage LAA closure is an emerging technology for thromboembolic prevention in patients with atrial fibrillation AF The first human implantation of an LAA device occurred in 2001 and since then four devices have received CE mark approval These devices are being widely used in Europe for LAA closure in patients who are poor candidates for long term oral anticoagulation In the US the WATCHMAN device Boston Scientific is anticipated to receive FDA approval imminently for AF patients who are warfarin eligible This approval is projected to significantly expand the indications for LAA closures worldwide Thus the volume of procedures is anticipated to escalate This book discusses the epidemiology of AF as a cause of stroke the use of LAA closure in the reduction of thromboembolism with AF early surgical approaches and novel surgical devices for LAA closure and current percutaneous approaches and devices available for LAA closure The emphasis of this book is on percutaneous technical approaches and contemporary trial results on the leading devices PLAATO WATCHMAN Amplatzer Cardiac Plug and LARIAT It also reviews unapproved devices in development in both clinical and pre clinical phases

Left Atrial Appendage Occlusion in Everyday Clinical Practice Moniek Maarse, 2023 Despite the deeply rooted conviction that oral anticoagulation therapy is the primary strategy to prevent ischemic strokes in patients with atrial fibrillation non adherence

to oral anticoagulation therapy is common Percutaneous occlusion of the left atrial appendage is a mechanical alternative to oral anticoagulation therapy for stroke prevention Current guidelines recommend considering left atrial appendage occlusion in patients with contraindications for long term oral anticoagulation use This thesis investigates the effectiveness and safety of percutaneous left atrial appendage occlusion in everyday clinical practice The objectives were to optimize the procedure improve post procedural care and achieve better patient selection This thesis consists of two parts The first part focuses on the procedural aspects of percutaneous left atrial appendage occlusion providing insights into how patients can be optimally treated with this procedure in contemporary practice For example by using mini and micro probes during transesophageal echocardiography thus eliminating the need for general anesthesia The second part addresses post procedural treatment and clinical outcomes after left atrial appendage occlusion It demonstrates among other things that cardioversion can safely occur after left atrial appendage occlusion that left atrial appendage occlusion remains effective in the long term in everyday clinical practice that it is meaningful to perform left atrial appendage occlusion in patients who have experienced thromboembolic complications despite anticoagulation use and also describes some predictors of the feared complications of thrombus formation on the device
