Math Education for America analyzes math education policy through the social network of individuals and private and public  
organizations that influence it in the United States The effort to standardize a national mathematics curriculum for public  
schools in the U S culminated in 2010 when over 40 states adopted the Common Core State Standards for Mathematics  
Rather than looking at the text of specific policy documents this book complements existing critical reviews of the national  
math education curriculum by employing a unique social network analysis Breaking new ground in detailing and theorizing  
the politics of math education Wolfmeyer argues that the private interests of this network are closely tied to a web of  
interrelated developments human capital education policy debates over traditional and reform pedagogy the assumed  
content knowledge deficit of math teachers and the proliferation of profit driven educational businesses By establishing the  
interconnectedness of these interests with the national math education curriculum he shows how the purported goals of math  
education reform are aligned with the prevailing political agendas of this social network rather than the national interest
