

Scientific Paper Outline

Voice:

- All in present tense, except for methods sentences, which are in past tense.
- Do NOT use 1st person. The experiment should always be the subject of your sentences, NOT yourselves! (For example, do NOT say, "We burned peanuts." Instead say, "Peanuts were burned.")

Format:

- Required Length: 7 - 10 pages
- 12 point font -Arial or Times New Roman only.
- Line Spacing: 1.5 (go to Format and Paragraph to change line spacing)
- Abstract will be centered on top of the page.
- Double Column format for the rest of the paper (Introduction to Conclusion) Go to Format, Columns, and choose 2 columns
- Results Tables, Graphs, and Pictures do not need to be in columns.
- Always must be word-processed.
- Number your pages - Number should appear along bottom center of page
- Cover page: Include your name, date, class, teacher, and period somewhere on your cover.

Order and Subject of Paragraphs:

I. Abstract: (Include this title in your paper and center it!) ~ 1 paragraph

- An abstract is a one paragraph (6-8 sentences) summary of your entire project. You must use the IMRaC format for writing an abstract. In other words, you use one to two sentences to describe each of the following main points about the experiment (not about the classroom procedures) in your one-paragraph abstract:

I= Introduction (purpose)

M= Methods (simple overview of procedure)

R= Results (numerical data)

and

C= Conclusion (interpretation of data)

II. Introduction: (Include this title in your paper)~2-3 pages

- Introduce the lab and purpose of the lab. Explain the significance or importance of the experiment.
- Use additional research to provide some background information about the scientific concepts involved in the lab. This research must be cited in-text and a works cited page provided at the end of the paper.

Scientific Networking and the Global Health Network Supercourse Faina Linkov, Ronald LaPorte, 2006

Natural and man made disasters like floods and eruptions of volcanoes have tormented mankind since antiquity Despite all the warning signs it is certain that when the eruption of Vesuvius started on the morning of 24 August CE 79 it caught the local population of Pompeii utterly unprepared for the major disaster that ultimately ruined the entire city What makes our world today different from the population of ancient Pompeii 2 000 years ago is better abilities to share scientific data about the warning signs of disasters Modern technologies are giving us an unprecedented opportunity to share disaster preparedness and mitigation information very rapidly and effectively Technologies such as the Internet telecommunications etc have a great potential to help us prepare for disasters however oftentimes scientists are not taking advantage of them This publication focuses on the importance of the networking of scientists researching the area of natural and man made disasters to try to prepare the world better for them in the future

Geoscience Research and Education Vincent C. H. Tong, 2013-09-12 Focusing on geoscience this book applies a uniquely cross disciplinary perspective to its examination of the relationship between scientific research and teaching at universities Contributions show how the use of technology and innovative pedagogical design allows students at different stages of their university studies to develop skills and experience in geoscience research The book offers wide ranging insight from academics in geoscience science education and higher education policy and pedagogy as well as from students and industry experts The opening section sets the context with a chapter on teaching and research in the contemporary university by a world leading academic in higher education and an essay by the editor on the case of moving from research implicit to research enhanced teaching Part Two addresses the research teaching nexus in geoscience offering chapters entitled The Challenge of Combining Research and Teaching A Young Geoscientist's Perspective Teaching on the High Seas How Field Research Enhances Teaching at All Levels Curricula and Departmental Strategies to Link Teaching and Geoscience Research and Geoscience Internships in the Oil and Gas Industry among others In Part Three the use of technology is discussed in chapters such as Using Interactive Virtual Field Guides and Linked Data in Geoscience Teaching and Learning and Towards Technology and Research enhanced Education

TREE Electronic Feedback as a Teaching Tool in Geoscience The Program Design section includes chapters on Introducing University Students to Authentic Hands on Undergraduate Geoscience Research and the opportunity to link research and teaching in students final projects and more

Geoscience Research and Education Teaching at Universities is a useful resource for understanding the research teaching nexus and how it has been implemented in different types of universities and in different countries Science academics seeking to integrate research into teaching will find the book highly relevant to their work The emphasis on using technology as a means to link research and teaching will be of great interest and practical benefit to learning technologists science educators and university policymakers Together with the companion volume **Geoscience Research and Outreach Schools and Public Engagement** this book showcases the key role that geoscience research plays in a wide spectrum of educational settings

Writing for

Science Robert Goldbort, 2006-01-01 This book encompasses the entire range of writing skills that today's experimental scientist may need to employ. Chapters cover routine forms such as laboratory notes, abstracts, and memoranda, dissertations, journal articles, and grant proposals. Robert Goldbort discusses how best to approach various writing tasks as well as how to deal with the everyday complexities that may get in the way of ideal practice: difficult collaborators, experiments gone wrong, funding rejections. He underscores the importance of an ethical approach to science and scientific communication and insists on the necessity of full disclosure.

Micro-Community-Based Participatory Research Health Science Projects, to Problem-solve and Build Leadership skills in Children at risk of ACES in extreme Urban Poverty Robert A. Branch MD FRCP, Michelle L. Steimer, LLC, NCC LPC, 2024-01-02 The Orenda approach. We describe the foundational base and health and education process to interface science and health learning for vulnerable adolescents who live in extreme urban poverty in the US: the forgotten children. To manage emotional and social barriers at this critical stage of their lives. These children live in neighborhoods concentrated with dysfunctional families, many with Adverse Childhood Experiences (ACEs). They are at risk for complications of personal and environmental factors while still adolescents. They lack the opportunity to build resilience and leadership to overcome these challenges. We integrate experiential learning approaches between contemporary physician health and K-12 science learning pedagogy to emphasize the value of science to a community. Our experiences are presented of challenges faced and barriers overcome over 4 years in over 100 adolescents in different extreme neighborhoods of poverty in the rust belt city of Pittsburgh. Mission 1: To experience the social skills in an ethical framework for critical thinking and leadership by conducting successful community research in forgotten children. 2: To improve the local culture of health care to reduce health disparities in underserved neighborhoods. The Orenda Approach. An Iroquois adjective denotes the goal of developing leadership in adolescents. The approach is by organizing health sciences clubs for at-risk adolescents as an after-school activity with trained mentors. Small teams select and identify locally relevant health disparities. Micro-Community Based Participatory Research (mCBPR) projects. Using the 5 steps of mCBPR scientific process with a mantra of learn, decide, and do, at each step they conduct a wide range of practices to extend skills promoted by STEM disciplines by adding arts and science as STREAM learning. The mCBPR projects are used to draw inferences and present recommendations to reduce barriers posed by the local community. Fitted into an academic school year in weekly OST club meetings, with an end of academic year, the results are shared in a local community health fair. Long-term objectives. We offer a model for a city-wide network of clubs targeted to the most underserved neighborhoods as an approach to improve city-wide health equity. If sustained, this could contribute multiple topics for a cumulative increased awareness to enhance the local culture of health. Without help, these forgotten children are destined to the local cycle of failure, a societal lost opportunity. With help, each year a cohort of students would be trained in problem-solving as an increased societal opportunity as community leaders for the future.
