the radiographs show no fracture but some signs of a malignant bony tumour which on further investigation is an osteosarcoma. Radiology Today 4 Friedrich H. W. Heuck, Martin W. Donner, 2012-12-06 The biennial symposium Radiology Today continues its original mission to bring together European and American radiologists to discuss advances in the field. This volume presents material by well known experts in cardiovascular and skeletal radiology. Its aim is to provide an overview of each major topic, trends in clinical development and current interests in research. The future holds much promise for cardiovascular and skeletal radiology primarily because of new techniques and procedures but also because of the development of imaginative approaches to clinical problems. Ideas are born on both sides of the Atlantic and we believe that it is important to ensure a rapid exchange of new information and to determine how it fits into today's medical care, keeping in mind the quality of patients' care, their safety and comfort as well as cost. The traditional role of radiologists as consultants has increased greatly over time with new responsibilities being continuously added. We radiologists are challenged to determine the diagnostic pathway appropriate to each patient. To arrive at the diagnosis quickly, safely and at the lowest possible cost is as important as our participation in determining the patient's management. Some therapeutic procedures are even carried out by diagnostic radiologists themselves employing ultrasound, computed tomography or fluoroscopy and intracavitary catheters. Abscesses can be drained and blood vessels dilated or blocked. In diagnosis and therapy events are moving quickly and advances are made at a rapid pace.

Musculoskeletal Imaging Felix S. Chew, 2003 Introducing a brand new volume of The Core Curriculum, a series of textbooks that are indispensable as both guides for radiology residents, rotations and study tools for written boards or recertification exams. Each volume of The Core Curriculum examines one key area such as ultrasound, neuroradiology, musculoskeletal imaging, cardiopulmonary imaging, head and neck imaging or interventional radiology and focuses on the essential information readers need to do well on the boards. The user friendly presentation includes chapter outlines, tables, bulleted lists, boxed text, margin notes, key review points, hundreds of illustrations and an easy to follow layout.
