Mechanizing Hypothesis Formation Jan Rauch,Milan Šimůnek,David Chudán,Petr Máša,2022-10-20 Mechanizing hypothesis formation is an approach to exploratory data analysis Its development started in the 1960s inspired by the question can computers formulate and verify scientific hypotheses The development resulted in a general theory of logic of discovery It comprises theoretical calculi dealing with theoretical statements as well as observational calculi dealing with observational statements concerning finite results of observation Both calculi are related through statistical hypotheses tests A GUHA method is a tool of the logic of discovery It uses a one to one relation between theoretical and observational statements to get all interesting theoretical statements A GUHA procedure generates all interesting observational statements and verifies them in a given observational data Output of the procedure consists of all observational statements true in the given data Several GUHA procedures dealing with association rules couples of association rules action rules histograms couples of histograms and patterns based on general contingency tables are involved in the LISp Miner system developed at the Prague University of Economics and Business Various results about observational calculi were achieved and applied together with the LISp Miner system The book covers a brief overview of logic of discovery Many examples of applications of the GUHA procedures to solve real problems relevant to data mining and business intelligence are presented An overview of recent research results relevant to dealing with

domain knowledge in data mining and its automation is provided Firsthand experiences with implementation of the GUHA method in the Python language are presented *Formal Methods for Distributed System Development* Tommaso Bolognesi, Diego Latella, 2013-03-20 th The 20 anniversary of the IFIP WG6 1 Joint International Conference on Fonna Methods for Distributed Systems and Communication Protocols FORTE XIII PSTV XX was celebrated by the year 2000 edition of the Conference which was held for the first time in Italy at Pisa October 10 13 2000 In devising the subtitle for this special edition Fonna Methods Implementation Under Test we wanted to convey two main concepts that in our opinion are reflected in the contents of this book First the early pioneering phases in the development of Formal Methods FM s with their conflicts between evangelistic and agnostic attitudes with their over optimistic applications to toy examples and over skeptical views about scalability to industrial cases with their misconceptions and myths all this is essentially over Many FM s have successfully reached their maturity having been implemented into concrete development practice a number of papers in this book report about successful experiences in specifying and verifying real distributed systems and protocols Second one of the several myths about FM s the fact that their adoption would eventually eliminate the need for testing is still quite far from becoming a reality and again this book indicates that testing theory and applications are still remarkably healthy A total of 63 papers have been submitted to FORTEIPSTV 2000 out of which the Programme Committee has selected 22 for presentation at the Conference and inclusion in the Proceedings **Formal Methods in Computer-Aided Design** Mark D.
