Selenium in Food and Health Conor Reilly,1996 Selenium is one of the most intensively studied of the inorganic components of the diet Ever since it was recognized in the 1950 s that the element which had until then been known only for its toxic effects was also an essential nutrient it has attracted growing interest in human as well as agricultural fields of science Studies of selenium cover many disciplines food agriculture medicine which have all produced literature exclusive to that particular area This book brings together information from this wide range of disciplines to provide a comprehensive review of the role of selenium The emphasis is on selenium as a food component and nutrient but its biological significance and environmental impact is also addressed This book will be of interest to industrial and academic food scientists and technologists concerned with food analysis quality and toxicity as well as nutritionists environmental chemists ecotoxicologists and physicians **Bioaccessibility and Digestibility of Lipids from Food** Myriam M.-L. Grundy,Peter J. Wilde,2021-01-19 The structure of a food influences the way it is transformed during processing and digestion This in turn

has an impact on nutrient bioaccessibility release and digestibility and subsequently on the physiological response and health of the individual who consumes that food. Although evidence exists on the health benefits associated with the inclusion of certain lipid rich foods e.g. nuts, dairy products and fish in the diet, the mechanisms that explain the physiological effects and the long term benefits are not well understood. Lipids in themselves have many beneficial health effects: they are a source of energy and essential fatty acids; they are structural components of cell membranes; they are required to solubilise fat soluble compounds; and they serve as precursors of hormones. In addition, the overall structure of the food containing the lipids plays a crucial role in determining health benefits, notably by influencing lipid bioaccessibility and digestibility. Bioaccessibility and digestibility of lipids from food uniquely focuses on the physico-chemical properties of lipids and lipid rich food as well as the subsequent effects on human health. Chapters from experts in food digestion examine food structure at both the macro and micro levels, covering lipids from plant and animal food products. The editors have developed the book for dietitians, nutritionists and food scientists. Clinicians and other health professionals, educators in nutrition and others working in the food industry will also find the material relevant.

Books in Print, 1994 **Sustainable Protein Production and Consumption: Pigs or Peas?** Harry Aiking, Joop de Boer, Johan Vereijken, 2006-10-12. Sustainable Protein Production and Consumption: Pigs or Peas is a book that presents and explores the PROFETAS programme for development of a more sustainable food system by studying the feasibility of substituting meat with plant based alternatives. The emphasis is on improving the food system by reducing the use of energy, land and freshwater at the same time, limiting the impacts on health and animal welfare associated with intensive livestock production. It is clear that such a new perspective calls not only for advanced environmental and technological research but also for in depth societal research as the acceptance of new food systems is critically contingent on perceptions and attitudes of modern consumers. In this unique multidisciplinary setting, PROFETAS has opened up pathways for a major transition in protein food production and consumption, not by just analyzing the food chain but rather by exploring the entire agricultural system, including biomass for energy production and the use of increasingly scarce freshwater resources. The study presented here is intended to benefit every stakeholder in the food chain, from policymakers to consumers, and it offers guiding principles for a transition towards an ecologically and socially sustainable food system from a multi-level perspective.
