Vapalahti, 2012-12-06 As an addition to the European postgraduate training system for young neurosurgeons we began to publish in 1974 this series of Advances and Technical Standards in Neurosurgery which was later sponsored by the European Association of Neurosurgical Societies This series was first discussed in 1972 at a combined meeting of the Italian and German Neurosurgical Societies in Taormina the founding fathers of the series being Jean Brihaye Bernard Pertuiset Fritz Loew and Hugo Krayenbühl Thus were established the principles of European co operation which have been

born from the European spirit flourished in the European Association and have throughout been associated with this series. The fact that the English language is well on the way to becoming the international medium at European scientific conferences is a great asset in terms of mutual understanding. Therefore we have decided to publish all contributions in English regardless of the native language of the authors. All contributions are submitted to the entire editorial board before publication of any volume. Our series is not intended to compete with the publications of original scientific papers in other neurosurgical journals. Our intention is rather to present fields of neurosurgery and related areas in which important recent advances have been made. The contributions are written by specialists in the given fields and constitute the first part of each volume.

Advances and Technical Standards in Neurosurgery Concezio Di Rocco, 2024-05-03. The book offers the update on several basic and clinical problems in neurosurgery compiled by internationally recognized experts. The main topics covered are cerebral tumors, epilepsy and vascular malformations, congenital and acquired spine anomalies. The first chapter is devoted to the genetics of the Moya Moya disease, a cerebral

vascular disease quite common in Asia that is not yet sufficiently known The second chapter is devoted to the current application of VR AR virtual reality augmented reality to pediatric neurosurgery The next four chapters discuss the management of spine diseases respectively the tethered cord syndrome the severe forms of spondylolisthesis the role of perioperative checklists and the long term outcomes of myelomeningocele Two chapters deal with the surgical aspects of the management of intraventricular tumors Cerebral tumors namely malignant gliomas and jugular foramen tumors are the subject of the remaining chapters Approaching the issue of technical standards in the everyday clinical practice of neurosurgery this book of great interest for neurosurgeons neuroradiologists vascular and plastic surgeons *Schmidek and Sweet: Operative Neurosurgical Techniques 2-Volume Set* Alfredo Quinones-Hinojosa, MD, FAANS, FACS, 2012-06-22

Surgery of the Skull Base Madjid Samii,Wolfgang Draf,2012-12-06 The region of the skull base was long considered a surgical barrier because of its complex anatomy With few exceptions the region immediately beyond the dura or bony skull base constituted a no man s land for the surgeon working from the other direction A major reason for this was the high morbidity associated with operative procedures in that area using traditional dissection techniques This situation changed with the advent of the operating microscope Used initially by ear nose and throat specialists for resective and reconstructive surgery

of the petrous bone and paranasal sinuses the operating microscope was later introduced in other areas and neurosurgeons began using it in the mid 1960s With technical equality thus established the groundwork was laid for taking a new systematic and interdisciplinary approach to surgical problems of the skull base Intensive and systematic cooperation between ear nose and throat surgeons and neurologic surgeons had its origins in the departments of the University of Mainz kindly supported by our chairmen Prof Dr Dr hc Kurt Schiirmann Department of Neurosurgery and Prof Dr W Kley Department of Ear Nose and Throat Diseases Head and Neck Surgery The experience gained from this cooperation was taught in workshops held in Hannover from 1979 to 1986 acquiring a broader interdisciplinary base through the participation of specialists from the fields of anatomy pathology neuroradiology ophthalmology and maxillofacial surgery
