Lucky for one young cancer patient in 1956 that Henry Kaplan, had already come to Stanford with an unusual goal to turn a device used by the physicists on campus—the linear accelerator—into a tool for fighting cancer. That patient, a 2-year-old boy suffering from a tumor in his eye, was the first to undergo X-ray treatment from a medical linear accelerator that Kaplan developed with campus physicists. The treatment saved the child's sight and he lived the rest of his life with his vision intact.

It all came about because Kaplan thought he could find a way to focus intense X-rays to destroy a tumor without harming surrounding healthy tissues—and he thought the physicists would be the ones to help him do so. "In the 1950s, I began to hear cocktail party conversations about an interesting new *atom smasher* being developed on the campus by Bill Hanson and Edward Ginzton and their colleagues," Kaplan recalled in a 1983 interview, the year before his death.

A Practical Guide to MR-Linac Indra J. Das, Filippo Alongi, Poonam Yadav, Bharat B. Mittal, 2024-03-20 This book offers a detailed guide to MR Linac a unique and fast growing radiation treatment modality MR linac is new

technology that is a fusion of an MRI and a linear accelerator on the same gantry. It can change both target volume delineation and tumor visualization in real time using MR cine images and treatment. Tumor location changes moment to moment as radiation is delivered but this cannot be visualized in current radiation therapy practices. This new and rapidly growing technology can provide adaptive therapy that was not possible before. This book presents current knowledge on MR linac technology, clinical practices, and ultimately patient outcome where dose escalation is not possible due to limiting normal tissue structures in the vicinity of tumor. There are two commercial MR linac machines under consideration and both will be covered in detail. The book is divided into four sections. The first gives a general introduction to MR Linac, covering the role of MRI in radiation oncology, the clinical necessity of this technology, and patient selection. The next section details the physics and technology of MR Linac, covering image sequence, motion management, and treatment planning. Section three offers the clinical applications of MR Linac and is divided by body area, including lung, prostate, and breast. Finally, the fourth section looks to the future and what this technology can mean for radiation oncology. This is an ideal guide for radiation oncologists, medical physicists, and relevant trainees.

Reviews Of Accelerator Science And Technology - Volume 9: Technology And Applications Of Advanced Accelerator Concepts Alexander Wu Chao, Weiren Chou, 2017-02-20. Since its invention in the 1920s, particle accelerators have made tremendous progress in accelerator science, technology, and applications. However, the fundamental acceleration principle, namely to apply an external radiofrequency (RF) electric field to accelerate charged particles, remains unchanged. As this method, either room temperature RF or superconducting RF, is approaching its intrinsic limitation in acceleration gradient measured in MeV/m, it becomes apparent that new methods with much higher acceleration gradient measured in GeV/m must be found for future very high energy accelerators, as well as future compact table-top or room size accelerators. This volume introduces a number of advanced accelerator concepts (AAC), their principles, technologies, and potential applications. For the time being, none of them stands out as a definitive direction in which to go. But these novel ideas are in hot pursuit and look promising. Furthermore, some AAC requires a high power laser system. This has the implication of bringing two different communities, accelerator and laser, to join forces and work together. It will have profound impact on the future of our field. Also included are two special articles: one on Particle Accelerators in China, which gives a comprehensive overview of the rapidly growing accelerator community in China; the other features the person of the issue, who was well known nuclear physicist Jerome Lewis Duggan, a pioneer and founder of a huge community of industrial and medical accelerators in the US.

RF Linear Accelerators Thomas P. Wangler, 2008-11-21. Borne out of twentieth century science and technology, the field of RF radio frequency linear accelerators has made significant contributions to basic research, energy, medicine, and national defense. As we advance into the twenty-first century, the linac field has been undergoing rapid development as the demand for its many applications, emphasizing high energy, high intensity, and high brightness output beams, continues to grow. *RF Linear Accelerators* is a textbook that is based on a US Particle
