Aeroponics Thomas Edison Ph D,2019-12-02 Aeroponics is a great alternative for growing plants in small spaces especially indoors Aeroponics is similar to hydroponics as neither method uses soil to grow plants however with hydroponics water is used as a growing medium In aeroponics no growing medium is used Instead the roots of plants are suspended or hung in a dark chamber and periodically sprayed with nutrient rich solution Growing with aeroponics is not difficult and the benefits far outweigh any drawbacks Nearly any plant can be successfully grown using aeroponics especially vegetables The plants grow faster yield more and are generally healthier than those grown in soil Feeding for aeroponics is also easy as aeroponic grown plants typically require less nutrients and water Regardless of the system used indoors aeroponics requires little space making this method of growing plants especially suited to urban dwellers and the like Typically aeroponic plants are suspended usually inserted in the top over a reservoir within some type of sealed container Feeding for aeroponics is accomplished through the use of a pump and sprinkler system which periodically sprays nutrient rich solution onto the plant roots About the only drawback to growing with aeroponics is keeping everything thoroughly clean as its continually moist environment is more susceptible to bacteria growth It can also get expensive While growing with aeroponics is typically easy many of the commercial aeroponic systems can be relatively costly another downside However it doesn't have to be There are actually many personal aeroponic systems that you can make at home for lots less than those higher priced commercial systems For example one of the easiest DIY aeroponics systems consists of nothing more than a large sealable storage bin and PVC pipes and fittings Of course a suitable pump and a few other accessories are also necessary So if you are looking for another alternative when growing plants in smaller spaces why not consider growing with aeroponics Grab a copy now to get the indepth details on this most exciting topic **Aeroponics** Charles E.
