Adsorbents Ahad Ghaemi, Zohreh Khoshraftar, Fereshteh Pouresmaeil, 2025-09-10 CO₂ Adsorbents comprehensively explores the materials and technologies used for adsorbing carbon dioxide It covers materials synthesis characterization adsorption mechanisms applications modeling and potential environmental and industrial impacts to help readers find the best adsorbent for their needs Through its coverage of advanced research and technological developments in the field such as novel adsorbent materials innovative synthesis methods and advancements in scalable production techniques the book aims to contribute to the understanding of CO₂ adsorption processes materials and their practical applications in addressing the global challenge of climate change and CO₂ emissions reduction Presents an overview of different adsorbent materials used for CO₂ capture and the methods of synthesis modification and functionalization to enhance their CO₂ adsorption

performance Describes characterization techniques used to assess the structural morphological and surface properties of CO₂ adsorbents Explores the fundamental mechanisms behind CO₂ adsorption of various materials the interactions between CO₂ molecules and the adsorbent surface and the kinetics and thermodynamics of CO₂ adsorption processes Discusses through real world case studies the applications of CO₂ adsorbents in various industries such as natural gas purification carbon capture and storage biogas upgrading and air purification and their potential in mitigating greenhouse gas emissions and addressing environmental concerns Analyzes the environmental impact and feasibility of using CO₂ adsorbents in real world scenarios and the challenges and benefits of integrating adsorption technologies into existing industrial processes Provides insights into potential improvements challenges and directions for further research and development Through its practical relevance advanced insights and focus on sustainability and innovation this text serves as a valuable resource for researchers engineers and professionals working in the field of carbon capture and utilization including those in chemical environmental and related engineering disciplines Catalog of Copyright Entries. has become one of the fastest growing topics in computational linguistics and information access To advance research in the area of dialogue based question answering we propose a combination of methods from different scientific fields i e Information Retrieval Dialogue Systems Semantic Web and Machine Learning This book sheds light on adaptable dialogue based question answering We demonstrate the technical and computational feasibility of the proposed ideas the introspective methods in particular by beginning with an extensive introduction to the dialogical problem domain which motivates the technical implementation The ideas have been carried out in a mature natural language processing NLP system the SmartWeb dialogue system which was developed between 2004 and 2007 by partners from academia and industry We have attempted to make this book a self containing text and provide an extra section on the interdisciplinary scientific background The target audience for this book comprises of researchers and students interested in the application potential of semantic technologies for difficult AI tasks such as working dialogue and QA systems **Lithium-ion Batteries** Perla B.

Balbuena,Yixuan Wang,2004 This invaluable book focuses on the mechanisms of formation of a solid electrolyte interphase SEI on the electrode surfaces of lithium ion batteries The SEI film is due to electromechanical reduction of species present in the electrolyte It is widely recognized that the presence of the film plays an essential role in the battery performance and its very nature can determine an extended or shorter life for the battery In spite of the numerous related research efforts details on the stability of the SEI composition and its influence on the battery capacity are still controversial This book carefully analyzes and discusses the most recent findings and advances on this topic **Nuclear Science Abstracts** ,1975

Nanochemistry for Chemistry Educators Riam

Abu Much, Kurt Winkelmann, Muhamad Hugerat, 2022-06-29 For the first time this book sets out ways to teach the science of nanochemistry at a level suitable for pre service and in service teachers in middle and secondary school The authors draw upon peer reviewed science education literature for experiments activities educational research and methods of teaching the subject The book starts with an overview of chemical nanotechnology including definition of the basic concepts in nanoscience properties types of nanostructured materials synthesis characterization and applications It includes examples of how nanochemistry impacts our daily lives This theoretical background is an address for teachers even if they do not have enough information about the subject of nanoscale science Subsequent chapters present best practices for presenting the material to students in a way that improves their attitudes and knowledge toward nanochemistry and STEM subjects in general The final chapter includes experiments designed for middle and high school students From basic science through to current and near future developments for applications of nanomaterials and nanostructures in medicine electronics energy and the environment users of the book will find a wealth of ideas to convey nanochemistry in an engaging way to students

Emerging Automotive Battery Chemistries Bart Kolodziejczyk,2023-04-12 There is an urgent need to decarbonize various industry sectors including transportation however this is difficult to achieve when relying solely on today s lithium ion Li ion battery technology A lack of sufficient supply of critical materials including lithium nickel and cobalt is a major driving force behind research development and commercialization of new battery chemistries that can support this energy transition Many emerging chemistries do not face the same supply safety and often durability challenges associated with Li ion technology yet these solutions are still very immature and require significant development effort to be commercialized Emerging Automotive Battery Chemistries Hedging Market identifies and evaluates various chemistries suitable for deployment in the automotive industry and describes advantages disadvantages and development challenges for each identified technology Additionally it outlines development timelines contending that to benefit from these new technologies in a decade or so commercialization needs to begin today e g de risking critical material supply chains developing circular approaches The report also proposes policy interventions to enable developments of these new chemistries and to allow those immature technologies to compete with well established Li ion batteries Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2023008>

Interfacial Mechanics Jane Wang,Dong Zhu,2019-12-06 Understanding the characteristics of material contact and lubrication at tribological interfaces is of great importance to engineering researchers and machine designers Traditionally contact and lubrication are separately studied due to technical difficulties although they often coexist in reality and they are actually on the same physical ground Fast research advancements in recent years have enabled the development and application of unified models and numerical approaches to simulate contact and lubrication merging their studies into the domain of Interfacial Mechanics This book provides updated information based on recent

research progresses in related areas which includes new concepts theories methods and results for contact and lubrication problems involving elastic or inelastic materials homogeneous or inhomogeneous contacting bodies using stochastic or deterministic models for dealing with rough surfaces It also contains unified models and numerical methods for mixed lubrication studies analyses of interfacial frictional and thermal behaviors as well as theories for studying the effects of multiple fields on interfacial characteristics The book intends to reflect the recent trends of research by focusing on numerical simulation and problem solving techniques for practical interfaces of engineered surfaces and materials This book is written primarily for graduate and senior undergraduate students engineers and researchers in the fields of tribology lubrication surface engineering materials science and engineering and mechanical engineering *The ...
