Paparella's Otolaryngology: Head & Neck Surgery Michael M Paparella, Sady Selaiman da Costa, Johan Fagan, *Chronic Otitis Media* Bernard Ars, 2008 The history of surgery for chronic suppurative otitis media CSOM is littered with stories of techniques and materials that were tried with enthusiasm but without a reasonable expectation of long term success The early papers on tympanoplasty and sadly even some still today contain numerous short term follow up reports of new procedures that looked as if they might revolutionise ear surgery By the nature of the problem the longer term results often proved to be poor and by the nature of humans the original author didn't report this As a result perhaps hundreds of patients elsewhere were subjected to surgery that was already doomed to

failure even before the operations started The journals of the sixties and seventies contain many reports which most would rather forget I began my otologic career in the early sixties at the height of the otologic renaissance and so often we felt that with just one more push conductive deafness would become a thing of the past Now we know that the problems of middle ear reconstruction are multifactorial and that we are not simply looking for one single step to restore and maintain hearing and stability What we need is a greater understanding of why some procedures succeed and others fail Happily in this book Professor Ars and his team of leading clinicians and scientists begin by looking at the ranges of causes of the problems They then move on to examine the essentials needed for getting good results and they do this in the light of those things which we know at the outset cannot possibly succeed Professor Ars has gathered together an excellent group of otologists who start with the initial causes of the problems and move on to look for the essentials of success Having identified these they go on to explore how we can lay the foundations to achieve them Finally they look at the operative procedures they consider most likely to achieve success This is an excellent book which should improve the thinking behind surgery for CSOM Alan G Kerr OBE FRCS *Pediatric Otolaryngology* Bluestone, 2014 Preceded by *Pediatric otolaryngology* edited by Charles D Bluestone et al 4th ed c2003 *Emergencies in ENT* Rupa Vedantam, 2025-07-02 The book is a comprehensive guide to managing acute conditions in ENT It offers a unique symptom based approach tailored to the Indian context The second edition includes new chapters techniques and enhanced illustrations The book also contains embedded videos illustrating diagnostic techniques and surgical methods It is a valuable resource for anyone looking to stay updated on the latest management techniques in ENT emergencies The chapters cover critical topics such as acute epistaxis sudden sensorineural hearing loss acute vertigo and complications of otitis media Readers will also find in depth discussions on acute facial and neck swellings acute dysphagia acute stridor acute maxillofacial trauma acute anaphylaxis and various acute postoperative complications The authors provide systematic clinical evaluations and supportive investigations followed by commonly available treatment modes All the contributors are actively involved in the management of cases described This book is a must read for its practical insights into real world cases in secondary or tertiary care institutions The book is ideal for undergraduates postgraduates fellowship trainees and ENT surgeons in smaller hospitals or mission hospitals in remote areas of India
