Advanced Topics in Perpetual Motion Tyson Bergquist, 2015-12-23 Advanced Topics in Perpetual Motion by Tyson Bergquist *"Civilizing" Rio* Teresa Meade, 1996-09-15 A massive urban renewal and public health campaign in the first decades of the nineteenth century transformed Brazil's capital into a showcase of European architecture and public works. The renovation of Rio or civilization campaign as the government called it widened streets, modernized the port and improved sanitation, lighting and public transportation. These changes made life worse, not better, for the majority of the city's residents; however, the laboring poor could no longer afford to live in the downtown and the public health plan did not extend to the peripheral areas where they were being forced to move. Their resistance is the focus of Teresa Meade's study. Meade details how Rio grew according to the requirements of international capital which financed, planned and oversaw the renewal and how local movements resisted these powerful distant forces. She also traces the popular rebellion that continued for more than twenty years after the renovation ended in 1909, illustrating that community protests are the major characteristic of political life in the modern era. Body Sensor Networking, Design and Algorithms Saeid Sanei, Delaram Jarchi, Anthony G. Constantinides, 2020-07-13 A complete guide to the state of the art theoretical and manufacturing developments of body sensor network design and algorithms. In *Body Sensor Networking: Design and Algorithms*, professionals in the field of Biomedical Engineering and e-health get an in-depth look at advancements, changes and developments. When it comes to advances in the industry, the text looks at cooperative networks, noninvasive and implantable sensor, microelectronics, wireless sensor networks, platforms and optimization, to name a few. Each chapter provides essential information needed to understand the current landscape of technology and mechanical developments. It covers subjects including Physiological Sensors, Sleep Stage Classification, Contactless Monitoring and much more. Among the many topics covered, the text also includes additions such as Over 120 figures, charts and tables to assist with the understanding of complex topics. Design examples and detailed experimental works. A companion website featuring MATLAB and selected data sets. Additionally, readers will learn about wearable and implantable devices, invasive and noninvasive monitoring, biocompatibility and the tools and platforms for long-term, low-power deployment of wireless communications. It's an essential resource for understanding the applications and practical implementation of BSN when it comes to elderly care, how to manage patients with chronic illnesses and diseases and use cases for rehabilitation. *Working-Class Mobilization and Political Control* Charles L. Davis, 2014-07-15 Historically, Latin American political regimes have sought to postpone far-reaching economic reforms and improvements in living standards in order to facilitate the accumulation of private capital. These goals have led to exclusion of the lower classes from the political process, altogether or to efforts to control their political mobilization. The ability of governments to maintain such control has often been attributed to the lack of political sophistication by the working class or to the distribution of benefits through patron-client networks designed to preserve the hegemony of ruling parties. Using new survey data from 500

industrial workers in Mexico and Venezuela Charles L Davis now questions these conventional explanations and two others that industrial workers are part of a labor aristocracy and are therefore content with the performance of the capitalist regimes and that political control is exercised through restriction of partisan competition and thus of opportunities for workers to challenge developmental priorities and public policy goals Davis s study demonstrates that working class mobilization is more firmly controlled in Mexico s one party dominant political system than in Venezuela s two party system He finds little evidence that political participation in either country is guided by labor unions with ties to dominant parties Nor are these workers content with the performance of the regimes or lacking in political sophistication The primary explanation for their psychological disengagement from politics and avoidance of protest voting appears to be the lack of meaningful electoral options Davis s two case studies provide important new insights into an issue that appears certain to remain explosive as dissident labor leaders in Latin America seek to mobilize working class opposition to existing state developmental strategies
