Advances In Configural Frequency Analysis Methodology In The Social Sciences:

Advances in Configural Frequency Analysis Alexander von Eye, Patrick Mair, Eun Young Mun, 2010-04-20 Using real world data examples this authoritative book shows how to use the latest configural frequency analysis CFA techniques to analyze categorical data Some of the techniques are presented here for the first time In contrast to such methods as log linear modeling which focus on relationships among variables CFA allows researchers to evaluate differences and change at the level of individual cells in a table Illustrated are ways to identify and test for cell configurations that are either consistent with or contrary to hypothesized patterns the types and antitypes of CFA control for potential covariates that might influence observed results develop innovative prediction models address questions of moderation and mediation and analyze intensive longitudinal data The book also describes free software applications for executing CFA This book will be invaluable to researchers and graduate students in psychology education management public health sociology and other social behavioral and health science disciplines It will also serve as a supplemental text in graduate level courses on categorical data analysis longitudinal analysis and person oriented research

Advances in Configural Frequency Analysis Alexander von Eye, Patrick Mair, Eun-Young Mun, 2010-04-20 Using real world data examples this authoritative book shows how to use the latest configural frequency analysis CFA techniques to analyze categorical data Some of the techniques are presented here for the first time In contrast to methods that focus on relationships among variables such as log linear modeling CFA allows researchers to evaluate differences and change at the level of individual cells in a table Illustrated are ways to identify and test for cell configurations that are either consistent with or contrary to hypothesized patterns the types and antitypes of CFA control for potential covariates that might influence observed results develop innovative prediction models address questions of moderation and mediation and analyze intensive longitudinal data The book also describes free software applications for executing CFA

Configural Frequency Analysis Alexander von Eye, Wolfgang Wiedermann, 2022-01-03 This unique book provides a comprehensive and detailed coverage of configural frequency analysis CFA the most useful method of analysis of categorical data in person oriented research It presents the foundations methods and models of CFA and features numerous empirical data examples from a range of disciplines that can be reproduced by the readers It also addresses computer applications including relevant R packages and modules Configural frequency analysis is a statistical method that allows the processing of important and interesting questions in categorical data The perspective of CFA differs from the usual perspective of relations among variables its focus is on patterns of variable categories that stand out with respect to specific hypotheses and as such CFA allows for testing numerous substantive hypotheses The book describes the origins of CFA and their relation to chi square analysis as well as the developments that are based on log linear modeling The models covered range from simple models of variable independence to complex models that are needed when causal hypotheses are tested Empirical data examples are provided for each model New models are introduced for person oriented mediation analysis and

locally optimized time series analysis and new results concerning the characteristics of CFA methods are bolstered using Monte Carlo simulations Primarily intended for researchers and students in the social and behavioral sciences the book will also appeal to anyone who deals with categorical data from a person centered perspective *Dynamic Process Methodology in the Social and Developmental Sciences* Jaan Valsiner, Peter C. M. Molenaar, Maria C.D.P. Lyra, Nandita Chaudhary, 2009-07-09 All psychological processes like biological and social ones are dynamic Phenomena of nature society and the human psyche are context bound constantly changing and variable This feature of reality is often not recognized in the social sciences where we operate with averaged data and with homogeneous stereotypes and consider our consistency to be the cornerstone of rational being Yet we are all inconsistent in our actions within a day or from one day to the next and much of such inconsistency is of positive value for our survival and development Our inconsistent behaviors and thoughts may appear chaotic yet there is generality within this highly variable dynamic The task of scientific methodologies qualitative and quantitative is to find out what that generality is It is the aim of this handbook to bring into one framework various directions of construction of methodology of the dynamic processes that exist in the social sciences at the beginning of the 21st century This handbook is set up to bring together pertinent methodological scholarship from all over the world and equally from the quantitative and qualitative orientations to methodology In addition to consolidating the pertinent knowledge base for the purposes of its further growth this book serves the major educational role of bringing practitioners students researchers and professionals interested in applications the state of the art know how about how to think about extracting evidence from single cases and about the formal mathematical statistical tools to use for these purposes

Introduction to Mediation, Moderation, and Conditional Process Analysis Andrew F. Hayes, 2013-04-22 Explaining the fundamentals of mediation and moderation analysis this engaging book also shows how to integrate the two using an innovative strategy known as conditional process analysis Procedures are described for testing hypotheses about the mechanisms by which causal effects operate the conditions under which they occur and the moderation of mechanisms Relying on the principles of ordinary least squares regression Andrew Hayes carefully explains the estimation and interpretation of direct and indirect effects probing and visualization of interactions and testing of questions about moderated mediation Examples using data from published studies illustrate how to conduct and report the analyses described in the book Of special value the book introduces and documents PROCESS a macro for SPSS and SAS that does all the computations described in the book The companion website www.afhayes.com offers free downloads of PROCESS plus data files for the book's examples Unique features include Compelling examples presumed media influence sex discrimination in the workplace and more with real data boxes with SAS SPSS and PROCESS code and loads of tips including how to report mediation moderation and conditional process analyses Appendix that presents documentation on use and features of PROCESS Online supplement providing data code and syntax for the book's examples **Intensive**

Longitudinal Methods Niall Bolger, Jean-Philippe Laurenceau, 2013-02-14 This book offers a complete practical guide to doing an intensive longitudinal study with individuals dyads or groups It provides the tools for studying social psychological and physiological processes in everyday contexts using methods such as diary and experience sampling A range of engaging worked through research examples with datasets are featured Coverage includes how to select the best intensive longitudinal design for a particular research question apply multilevel models to within subject designs model within subject change processes for continuous and categorical outcomes assess the reliability of within subject changes assure sufficient statistical power and more Several end of chapter write ups illustrate effective ways to present study findings for publication Datasets and output in SPSS SAS Mplus HLM MLwiN and R for the examples are available on the companion website www.intensivelongitudinal.com

Modern Psychometrics with R Patrick Mair, 2018-09-20 This textbook describes the broadening methodology spectrum of psychological measurement in order to meet the statistical needs of a modern psychologist The way statistics is used and maybe even perceived in psychology has drastically changed over the last few years computationally as well as methodologically R has taken the field of psychology by storm to the point that it can now safely be considered the lingua franca for statistical data analysis in psychology The goal of this book is to give the reader a starting point when analyzing data using a particular method including advanced versions and to hopefully motivate him or her to delve deeper into additional literature on the method Beginning with one of the oldest psychometric model formulations the true score model Mair devotes the early chapters to exploring confirmatory factor analysis modern test theory and a sequence of multivariate exploratory method Subsequent chapters present special techniques useful for modern psychological applications including correlation networks sophisticated parametric clustering techniques longitudinal measurements on a single participant and functional magnetic resonance imaging fMRI data In addition to using real life data sets to demonstrate each method the book also reports each method in three parts first describing when and why to apply it then how to compute the method in R and finally how to present visualize and interpret the results Requiring a basic knowledge of statistical methods and R software but written in a casual tone this text is ideal for graduate students in psychology Relevant courses include methods of scaling latent variable modeling psychometrics for graduate students in Psychology and multivariate methods in the social sciences

Doing Statistical Mediation and Moderation Paul E. Jose, 2013-03-29 Written in a friendly conversational style this book offers a hands on approach to statistical mediation and moderation for both beginning researchers and those familiar with modeling Starting with a gentle review of regression based analysis Paul Jose covers basic mediation and moderation techniques before moving on to advanced topics in multilevel modeling structural equation modeling and hybrid combinations such as moderated mediation User friendly features include numerous graphs and carefully worked through examples Helpful Suggestions about procedures and pitfalls Knowledge Boxes delving into special topics such as dummy coding and end of chapter exercises and problems with answers The

companion website provides downloadable sample data sets that are used in the book to demonstrate particular analytic strategies and explains how researchers and students can execute analyses using Jose s online programs MedGraph and ModGraph Appendices present SPSS AMOS and Mplus syntax for conducting the key types of analyses *Longitudinal Structural Equation Modeling* Todd D. Little,2013-02-26 This book has been replaced by Longitudinal Structural Equation Modeling Second Edition ISBN 978 1 4625 5314 3 **Data Analysis with Mplus** Christian Geiser,2012-11-14 A practical introduction to using Mplus for the analysis of multivariate data this volume provides step by step guidance complete with real data examples numerous screen shots and output excerpts The author shows how to prepare a data set for import in Mplus using SPSS He explains how to specify different types of models in Mplus syntax and address typical caveats for example assessing measurement invariance in longitudinal SEMs Coverage includes path and factor analytic models as well as mediational longitudinal multilevel and latent class models Specific programming tips and solution strategies are presented in boxes in each chapter The companion website <http://crmda.ku.edu/guilford/geiser> features data sets annotated syntax files and output for all of the examples Of special utility to instructors and students many of the examples can be run with the free demo version of Mplus *Applied Meta-Analysis for Social Science Research* Noel A. Card,2015-10-06 Offering pragmatic guidance for planning and conducting a meta analytic review this book is written in an engaging nontechnical style that makes it ideal for graduate course use or self study The author shows how to identify questions that can be answered using meta analysis retrieve both published and unpublished studies create a coding manual use traditional and unique effect size indices and write a meta analytic review An ongoing example illustrates meta analytic techniques In addition to the fundamentals the book discusses more advanced topics such as artifact correction random and mixed effects models structural equation representations and multivariate procedures User friendly features include annotated equations discussions of alternative approaches and Practical Matters sections that give advice on topics not often discussed in other books such as linking meta analytic results with theory and the utility of meta analysis software programs *Advancing Developmental Science* Anthony S. Dick,Ulrich Müller,2017-07-06 Advancing Developmental Science reviews the state of the science in theoretical methodological and topical research with a unique focus on the scholarship that developed within a process relational framework *A Handbook of Research Methods for Clinical and Health Psychology* Jeremy Miles,Paul Gilbert,2005 Though psychology as a discipline has grown enormously in popularity in recent years compulsory courses in research methods and statistics are seldom embarked upon with any great enthusiasm within the undergraduate and postgraduate communities Many postgraduate and PhD students start theirresearch ill equipped to design effective experiments and to properly analyse their results This lack of knowledge also limits their ability to critically assess and evaluate research done by others This book is a practical guide to carrying out research in health psychology and clinical psychology It bridges the gap between undergraduate and postgraduate study As well as describing the various techniques

and methods available to students it provides them with a proper understanding of what a specific technique does going beyond the introductory descriptions typical of most undergraduate methods books The book describes both quantitative and qualitative approaches to data collection providing valuable advice on methods ranging from psychometric testing to discourse analysis For both undergraduate and postgraduate students the book will be essential in making them aware of the full range of techniques available helping them to design scientifically rigorous experiments and effectively analyse their results

Dependent Data in Social Sciences Research Mark Stemmler, Wolfgang Wiedermann, Francis L.

Huang, 2024-10-21 This book covers the following subjects growth curve modeling directional dependence dyadic data modeling item response modeling IRT and other methods for the analysis of dependent data e.g. approaches for modeling cross section dependence multidimensional scaling techniques and mixed models It presents contributions on handling data in which the postulate of independence in the data matrix is violated When this postulate is violated and when the methods assuming independence are still applied the estimated parameters are likely to be biased and statistical decisions are very likely to be incorrect Problems associated with dependence in data have been known for a long time and led to the development of tailored methods for the analysis of dependent data in various areas of statistical analysis These include for example methods for the analysis of longitudinal data corrections for dependency and corrections for degrees of freedom Researchers and graduate students in the social and behavioral sciences education econometrics and medicine will find this up to date overview of modern statistical approaches for dealing with problems related to dependent data particularly useful

Methodological Advancements in Social Impacts of Tourism Research Manuel Alector Ribeiro, Kyle Maurice

Woosnam, 2023-11-07 This book offers a fresh perspective of on some of the cutting edge methodological approaches being used among scholars conducting work on social impacts of tourism These works are international in focus spanning across Europe e.g. Austria Croatia Portugal Serbia Slovenia Spain and Turkey and Asia e.g. Hong Kong Iran Japan Malaysia Singapore Thailand and Turkey The authors employ qualitative quantitative and mixed methods designs and some of the notable focus areas include comparative studies of residents' perspectives of tourism i.e. involving impacts of various forms of tourism and community children's perceptions of tourism statistical techniques such as multigroup invariance analysis and fuzzy set qualitative comparative analysis and the employment of novel measurement tools such as the implicit association test involving residents' implicit stereotypes of visitors from multiple countries and the utilization of the human scale development to identify residents' needs and satisfiers This edited volume will most assuredly advance the methodological focus of research on social impacts of tourism moving forward This book will be of great interest to all upper level students and researchers in tourism planning and related fields The chapters in this volume were originally published as a special issue of Journal of Sustainable Tourism

Statistics in Psychology Using R and SPSS Dieter Rasch, Klaus

Kubinger, Takuya Yanagida, 2011-12-12 Statistics in Psychology covers all statistical methods needed in education and

research in psychology This book looks at research questions when planning data sampling that is to design the intended study and to calculate the sample sizes in advance In other words no analysis applies if the minimum size is not determined in order to fulfil certain precision requirements The book looks at the process of empirical research into the following seven stages Formulation of the problem Stipulation of the precision requirements Selecting the statistical model for the planning and analysis The optimal design of the experiment or survey Performing the experiment or the survey Statistical analysis of the observed results Interpretation of the results

Person-Centered Methods Mark Stemmler, 2014-05-24 This book takes an easy to understand look at the statistical approach called the person centered method Instead of analyzing means variances and covariances of scale scores as in the common variable centered approach the person centered approach analyzes persons or objects grouped according to their characteristic patterns or configurations in contingency tables The main focus of the book will be on Configural Frequency Analysis CFA Lienert and Krauth 1975 which is a statistical method that looks for over and under frequented cells or patterns Over frequented means that the observations in this cell or configuration are observed more often than expected under frequented means that this cell or configuration is observed less often than expected In CFA a pattern or configuration that contains more observed cases than expected is called a type similarly a pattern or configuration that is less observed than expected are called an antitype CFA is similar to log linear modeling In log linear modeling the goal is to come up with a fitting model including all important variables Instead of fitting a model CFA looks at the significant residuals of a log linear model The book describes the use of an R package called confreq derived from Configural Frequency Analysis The use of the software package is described and demonstrated with data examples
