Critical Perspectives into Flow Research Janet Banfield, 2024-10-31 This book breaks down barriers between disciplines engaging with flow by speaking from geography into psychology to establish geographical foundations for this psychological phenomenon It frames and works with the multiple contradictions within the extant literature as productive rather than prohibitive thereby encouraging collaboration across discrepancies as well as across disciplines It incorporates new materials and perspectives to research on flow including aesthetic theory new materialism more than human geographies and critical development geographies to broaden the theoretical and empirical landscape of future flow scholarship It also digs more deeply into pre existing areas of interest within flow research than has been done before for example with respect to dark flow flowability and tele presence to facilitate more nuanced engagement with such terms It takes a step back from the detailed empirical work that characterizes most current flow research to pose questions as to how such divergent even contradictory findings can emerge from scholarship on a supposedly universal experience that is purportedly robustly constructed and whether this contrariness is necessarily problematic or emblematic of flow itself and therefore worthy of conceptual elaboration Finally it evokes global scale and long term critical perspectives on the future evolution of flow to counteract the presentism within existing work that emphasizes immediate gains e g performance wellbeing profit in an attempt to pre empt the worst ramifications of the progressive commodification and strategization of flow This innovative book is of interest to scholars from a range of fields from psychology to business and human resource management leisure studies and critical human geography

*Advances in Flow Research* Stefan Engeser, 2012-03-20 The concept of Flow was first explained by Csikszentmihalyi 1975 described as an optimal experience he noted that artists were entirely caught up in their projects working feverishly to finish them and then lose all interest in their work after completion

The incentive lies in the act of creativity itself The person feels optimally challenged while totally immersed in the activity At the heart of flow research is the motivational aspect of this experience Flow motivates people to carry out certain activities repeatedly seeking a challenge in the act and looking to improve their skills and abilities In this book this motivational aspect will be imbedded in and related to other theories of intrinsic motivation and empirical work on flow and performance The book provides a review of the current flow research with a focus on rigorous analysis on methodology The author takes the time to present methodological aspects in flow research to qualify empirical work In addition this volume presents neuropsychological considerations and empirical correlates of flow experiences The work also describes various theoretical integrations of the different paths being taken within the field of flow research It presents what has been learned since the beginning of flow research what is still open and how the mission to understand and foster flow experience research should continue *Tree Rings and Natural Hazards* Markus Stoffel,Michelle Bollschweiler,David R. Butler,Brian H.

Luckman,2010-07-15 Dendrogeomorphology Beginnings and Futures A Personal Reminiscence My early forays into dendrogeomorphology occurred long before I even knew what that word meant I was working as a young geoscientist in the 1960s and early 1970s on a problem with slope movements and deformed vegetation At the same time unknown to me Jouko Alestalo in Finland was doing something similar Both of us had seen that trees which produced annual growth rings were reacting to geomorphic processes resulting in changes in their internal and external growth patterns Dendroclimatology was an already well established field but the reactions of trees to other environmental processes were far less well understood in the 1960s It was Alestalo 1971 who first used the term dendrogeomorphology In the early 1970s I could see that active slope movement processes were affecting the growth of trees in diverse ways at certain localities I wanted to learn more about those processes and try to extract a long term chronology of movement from the highly diverse ring patterns **Advances**
