Stratigraphy, Lithology, and Sedimentary Features of Quaternary Alluvial Deposits of the South Platte River and Some of Its Tributaries East of the Front Range, Colorado David A. Lindsey, William H. Langer, Daniel H. Knepper (Jr.), 2005 **Geomorphology and River Management** Gary J. Brierley, Kirstie A. Fryirs, 2013-04-29 This book outlines a generic set of procedures termed the River Styles Framework which provides a set of tools for interpreting river character behavior condition and recovery potential Applications of the framework generate a coherent package of geomorphic information providing a physical template for river rehabilitation activities management and restoration of rivers is a rapidly growing topic for environmental scientists geologists and ecologists this book provides a learning tool with which to approach geomorphic applications to river management describes the essential geomorphological principles underlying river behaviour and evolution demonstrates how the River Styles Framework can turn geomorphic theory into practice to develop workable strategies for restoration and management based on real case studies and authors extensive experience applicable to river systems worldwide synthesises fluvial geomorphology ecology and management **New Perspectives on the Old Red Sandstone** Geological Society of London, 2000 Gravel-bed Rivers in the Environment Peter C. Klingeman, Paul D. Komar, Robert L. Beschta, 1998 Read what over 60 internationally recognized authors say about fluvial processes the environment and management of gravel bed rivers Learn about efforts to restore more natural ecosystem functions to adversely impacted rivers And for some mind stretching consider the hydraulic geomorphic implications of cataclysmic floods on Earth and Mars Beginning in 1980 and held at five year intervals these workshops have brought together leading international researchers to present and discuss new results concepts and state of the art methods to analyze fluvial processes in and manage gravel bed rivers The fourth workshop was held at Gold Bar Washington near the dynamic Skykomish River and strikingly beautiful Cascade Mountains Workshop papers and discussions are published to document

new concepts and ideas for broad use by those who study manage or have general interests in rivers This fourth Gravel Bed Rivers Workshop covers three focus topics The first topic reviews new developments regarding fluvial processes sediment transport and channel morphology in eight chapters on distinct subjects The second and third focus topics strongly emphasize gravel beds rivers in the environment their influences and their management in the next 19 chapters River restoration is examined for large European and North American rivers as parts of several of the environment management chapters Seven appended short papers report on research in progress presented at the Workshop in a poster discussion session Also included are two special interest chapters on giving a detailed analysis and morphologic hydraulic interpretation of cataclysmic floods and one summarizing a field exercise in management options for a long braided meandering reach of the Skykomish River near Gold Bar Publisher s description Encyclopedia of Geomorphology Andrew Goudie,2013-04-15 Volume editor is the leading authority in the field Alphabetically organized in two volumes c 700 comprehensively signed cross referenced and indexed entries Detailed bibliographies and suggestions for further reading follow most entries Fully illustrated over 300 plates and line drawings Written by an editorial team of over 270 experts from over thirty countries

Ground Penetrating Radar in Sediments C. S. Bristow,Harry M. Jol,2003 Included in this book are practical guidelines for data collection and interpretation from antennae configurations to sequence stratigraphy together with new advances such as vertical radar profiles and 3 D GPR imaging for hydrocarbon reservoir modelling designed to assist new and veteran users get the most from GPR Case studies in this book detail GPR investigations in a wide array of sedimentary environments including alluvial fans braided rivers spits beaches sand dunes lakes bogs and floodplains **River to Reservoir P.**

Corbett,A. Owen,A.J. Hartley,S. Pla Pueyo,D. Barreto,C. Hackney,S.J. Kape,2019-12-02 This volume brings together a number of papers from two workshops with the theme Rain Rivers Reservoirs which considered the dynamic changes to river systems as part of natural processes particularly changing climatic conditions Bringing researchers from two different locations to Brazil and the UK allowed scientists to contribute to and promote debate on current research on how the planet works and how we can live sustainably on it This volume features a series of papers on the geoscience of modern and ancient rivers from across the world Brazil United States Spain Argentina Canada India and the UK their evolution through time their management their deposits and their engineering with both subsurface aquifers hydrocarbon reservoirs of Carboniferous Triassic and Cretaceous age and surface reservoirs considered Megaflooding on Earth and Mars Devon M. Burr,Victor R.

Baker,Paul A. Carling,2009-09-24 A research summary of the causes and effects of megaflooding on Earth and Mars for hydrologists planetary scientists and engineers **Analogue and Numerical Modelling of Sedimentary Systems** Poppe de Boer,George Postma,Kees van der Zwan,Peter Burgess,Peter Kukla,2009-01-26 Understanding basin fill evolution and the origin of stratal architectures has traditionally been based on studies of outcrops well and seismic data studies of and inferences on qualitative geological processes and to a lesser extent based on quantitative observations of modern and

ancient sedimentary environments Insight gained on the basis of these studies can increasingly be tested and extended through the application of numerical and analogue forward models Present day stratigraphic forward modelling follows two principle lines 1 the deterministic process based approach ideally with resolution of the fundamental equations of fluid and sediment motion at all scales and 2 the stochastic approach The process based approach leads to improved understanding of the dynamics physics of the system increasing our predictive power of how systems evolve under various forcing conditions unless the system is highly non linear and hence difficult or perhaps even impossible to predict The stochastic approach is more direct relatively simple and useful for study of more complicated or less well understood systems Process based models more than stochastic ones are directly limited by the diversity of temporal and spatial scales and the very incomplete knowledge of how processes operate and interact on the various scales The papers included in this book demonstrate how cross fertilization between traditional field studies and analogue and numerical forward modelling expands our understanding of Earth surface systems

Glaciers and Glaciation, 2nd edition Douglas Benn, David J A Evans, 2014-02-04 Glaciers and Glaciation is the classic textbook for all students of glaciation Stimulating and accessible it has established a reputation as a comprehensive and essential resource In this new edition the text references and illustrations have been thoroughly updated to give today s reader an up to the minute overview of the nature origin and behaviour of glaciers and the geological and geomorphological evidence for their past history on earth The first part of the book investigates the processes involved in forming glacier ice the nature of glacier climate relationships the mechanisms of glacier flow and the interactions of glaciers with other natural systems such as rivers lakes and oceans In the second part the emphasis moves to landforms and sediment the interpretation of the earth s glacial legacy and the reconstruction of glacial depositional environments and palaeoglaciology

Braided Rivers Gregory H. Sambrook Smith, James L. Best, Charlie S. Bristow, Geoffrey E. Petts, 2009-03-05 This important book brings together eighteen cutting edge research papers first presented at the Second International Conference on Braided Rivers It includes the latest research on the dynamics deposits and ecology of these rivers Essential reading for geomorphologists earth scientists engineers and ecologists with a pure and applied interest in the study modelling and management of braided rivers

Rivers and Floodplains John S. Bridge, 2009-04-01 Rivers and Floodplains is concerned with the origin geometry water flow sediment transport erosion and deposition associated with modern alluvial rivers and floodplains how they vary in time and space and how this information is used to interpret deposits of ancient rivers and floodplains There is specific reference to the types and lifestyles of organisms associated with fluvial environments human interactions with rivers and floodplains associated environmental and engineering concerns as well as the economic aspects of fluvial deposits particularly the modeling of fluvial hydrocarbon reservoirs and aquifers Methods of studying rivers and floodplains and their deposits are also discussed Although basic principles are emphasized many examples are detailed Particular emphasis is placed on how an understanding of the nature

of modern rivers and floodplains is required before any problems concerning rivers and floodplains past or present can be addressed rationally Rivers and Floodplains is designed as a core text for senior undergraduate and graduate students studying modern or ancient fluvial environments particularly in earth sciences environmental sciences and physical geography but also in civil and agricultural engineering College teachers researchers and practising professionals will also find the book an invaluable reference Presents a process based approach which is relevant to modern curricula Discusses methods of studying rivers and floodplains and their deposits Provides many detailed examples throughout the text Emphasises the basic principles of this subject As the first synthesis of this entire field it will be a must have for all students studying modern or ancient fluvial environments Teachers researchers and practising professionals will find this an invaluable reference tool Rivers and Floodplains will also be of interest to geologists geographers and engineers

Reconstruction of Pleistocene Ice-dammed Lake Outburst Floods in the Altai Mountains, Siberia Jürgen

Herget, 2005-01-01 *General Technical Report RMRS*, 1998 **Glaciogenic Reservoirs and Hydrocarbon Systems**
Mads Huuse, J. Redfern, D. P. Le Heron, R. J. Dixon (Geologist), A. Moscariello, Jonathan Craig, 2012 Glaciogenic reservoirs and hydrocarbon systems occur intermittently throughout the stratigraphic record with particular prominence in Neoproterozoic Late Ordovician Permo Carboniferous and Late Cenozoic strata Recent interest in glaciogenic successions has been fuelled by hydrocarbon discoveries in ancient glaciogenic reservoirs in North Africa the Middle East Australia and South America Glaciogenic deposits of Pleistocene age are noteworthy for their content of groundwater onshore and potentially prospective and or hazardous gas accumulations offshore The abundant imprints of Pleistocene glaciations in both hemispheres can be used to reconstruct complex histories of repeated ice cover and retreat and glacier bed interactions thus informing our view on the dynamics of older ice caps and predictions of future glaciations This volume aims to provide a better understanding of glaciogenic processes their stratigraphic record and reservoir characteristics of glaciogenic deposits The book comprises 3 overview papers and 16 original case studies of Neoproterozoic to Pleistocene successions on 6 continents and will be of interest to sedimentologists glaciologists geophysicists hydrologists and petroleum geologists alike P 4 of cover **Treatise on Geomorphology**, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and

professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth s surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth s diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned River, Coastal and Estuarine Morphodynamics: RCEM 2007, Two Volume Set C. Marjolein Dohmen-Janssen, Suzanne J.M.H. Hulscher, 2019-08-22 This book brings together contributions from some 200 scientists from more than 20 countries who present and discuss the latest scientific research developments on this topic It is organized around the general themes of relations between scales and long term morphodynamics such as biogeomorphology small scale processes and grain sorting morphodynamic free behavior human interferences in morphodynamics The book provides an excellent overview of the state of the art knowledge on River Coastal and Estuarine Morphodynamics and will be of interest to academics engineers planners national and local authorities and all those involved in managing river estuarine and coastal habitats
