Ordinary Shares, Exotic Methods Francis Eng-Hock Tay, Lixiang Shen, Lijuan Cao, 2003 Exotic methods refer to a particular function within a general soft computing method such as genetic algorithms neural networks and rough sets theory They are applied to ordinary shares for a variety of financial purposes such as portfolio selection and optimization classification of market states forecasting of market states and data mining This is in contrast to the wide spectrum of work done on exotic financial instruments wherein advanced mathematics is used to construct financial instruments for hedging risks and for investment In this book particular aspects of the general method are used to create interesting applications For instance genetic niching produces a family of portfolios for the trader to choose from Support vector machines a special form of neural networks forecast the financial markets such a forecast is on market states of which there are three uptrending mean reverting and downtrending A self organizing map displays in a vivid manner the states of the market Rough sets with a new discretization method extract information from stock prices
