This book offers an overview of acute care surgery around the world, focusing on the four main branches of this novel subdiscipline: trauma, general emergencies, critical care, and rescue surgery. The book's primary goal is to provide a general view of acute care surgery while addressing the most important issues in depth. The content is divided into three parts, the first of which is dedicated to the general organization of trauma centers, including the composition of modern trauma teams. Protocols of activation and action for the trauma team, as well as damage control procedures both in the emergency room and in the surgical theatre, are described. The book also addresses the development of a trauma registry together with the quality assessment process that can be applied. In turn, the second part describes the principal protocols for making diagnoses, with special attention to circumstances such as unstable hemodynamics, neurological deterioration, normal vital signs, and penetrating injuries. The book subsequently deals with the most important aspects of trauma to the abdomen, chest, and pelvis, with notes on both surgical and intensive care issues. Practical descriptions of how to treat principal injuries to various organs are also provided. Finally, the third part of the book is dedicated to the most frequent general surgical emergencies and rescue surgical approaches and includes information on diagnostic support with point-of-care ultrasound and endoscopic advanced techniques. Management of Chest Trauma Adam M. Shiroff, Mark J. Seamon, Lewis

J. Kaplan, 2022-08-22 75% of patients who die from trauma have injuries to the chest. The care of the chest trauma patient can be incredibly complex, require multiple specialty and subspecialty services, and may require interventions available only at quaternary referral centers. This book provides a comprehensive state-of-the-art overview of chest trauma. The text reviews all aspects of chest wall, intra-thoracic organ, and great vessel injury management, with each section of the book structured anatomically to explore specific treatment options. The first section of the book contains an overview and introduction to the topic, discussing the definition and significance of chest trauma, initial resuscitation of the chest trauma patient, and centers of excellence, health systems, and regionalization. The following section is focused on chest wall injury, with chapters on acute rib fractures, sternal fracture, clavicle and scapula fractures, non-surgical aids in fracture healing, and anesthesia considerations. The next section spotlights thoracic organ injury, specifically focusing on cardiac injury, aorta, and great vessel injury, esophageal injury, tracheal and pulmonary injury, and thoraco-abdominal and combined injuries. Since injury care alone is insufficient in guiding the totality of care, the fourth section is dedicated to inpatient critical care. Topics covered in this section include principles of ICU resuscitation, coagulopathy management, ICU monitoring, ventilator management, and advanced acute pain management. With the increase in violent extremism around the world, including the use of non-conventional weapons, as well as the plethora of natural and man-made disasters, disaster and mass casualty events is the timely subject of the book's final section. Specific topics tackled in this section include blast injury, blast lung, pulmonary aspiration, thoracic crush injury after natural and man-made disasters, toxic agent exposures, the role of the local facility during a national disaster, and the ethics of resource allocation. The text also features over 100 high-yield illustrations, photographs, and tables.
