Jr., 2007-02-13 Glaucoma affects 1% of the population over the age of 40 It is important that the practicing clinician and surgeon recognize both primary and secondary glaucoma and cases associated with other disorders This lavishly illustrated text is authoritative and presents the reader with the whole spectrum of the disease The book is

divided into three main parts. Atlas of Glaucoma, Third Edition Neil T. Choplin, Carlo E. Traverso, 2014-06-04 Glaucoma affects all age groups and is a leading cause of blindness worldwide. It is imperative that practicing clinicians and surgeons recognize both primary and secondary glaucoma as well as cases of glaucoma associated with other disorders. Atlas of Glaucoma Third Edition provides an in-depth review and analysis of the management of glaucoma and discusses research advancements that have resulted in the latest therapies. See What's New in the Third Edition. The influence of the cornea on intraocular pressure measurements and new devices designed to account for this. Spectral domain optical coherence tomography (OCT). New statistical methods for tracking rates of progression. New medications released since 2006. New chapter on trabecular bypass surgery. Additional topics include Classification of glaucoma. Measurement of intraocular pressure and gonioscopy. The optic nerve. Psychophysical and electrophysiological testing in glaucoma. Primary open angle, secondary open angle, and angle closure glaucomas. Ocular blood flow and metabolism. Medical therapy and surgical treatments. Aqueous shunts. Combined cataract and glaucoma surgery. Treatment of developmental glaucoma. This colorful atlas contains detailed captions for each illustration, making it ideal for teaching purposes as well as a reference for the practicing ophthalmologist. Glaucoma encompasses a wide variety of clinical entities, clinical findings, diagnostic techniques, and treatment options. This book presents a vast assemblage of insight from internationally recognized experts.

**Vascular Considerations in Glaucoma**  
Alon Harris, 2012 Preface Open angle glaucoma (OAG) is one of the leading causes of impaired vision worldwide. The pathogenesis of glaucomatous optic neuropathy remains poorly understood, and several pathogenic mechanisms are proposed to coexist. As the world population ages, OAG will become more prevalent, and advances in the diagnosis and treatment of glaucomatous optic neuropathy are important to protect and improve the quality of life of our aging population. Treatment of OAG has been directed at lowering intraocular pressure (IOP), which is the only current therapeutic strategy available to patients with glaucoma. While a wide variety of studies have demonstrated that lowering IOP decreases the risk of glaucoma development and/or progression, many studies have also shown that some patients continue to lose vision despite significant lowering of IOP. There have been many attempts to elucidate the etiology for the deterioration in glaucomatous optic neuropathy despite low levels of IOP. Over the past several decades, deficits in the ocular circulation of patients with OAG have become well established, and these may explain the continued progression of OAG patients despite lowered IOP. The purpose of the present publication is to provide an updated view of ocular blood flow and vascular dysregulation in OAG. The importance of the topic was demonstrated by the focus of the 2009 6th Consensus meeting of the World Glaucoma Association, which focused entirely on blood flow deficits in patients with OAG. Although a great deal of knowledge on vascular risk factors in glaucoma has already been established, many questions remain: Do ocular blood flow deficits precede glaucoma progression? How does ocular perfusion pressure fit into the IOP and blood flow paradigm? What conclusions can be drawn from recent evidence showing the fluctuation of OAG risk factors, including IOP, blood pressure, and ocular perfusion?

pressure We hope this updated current prospective will serve as a foundation for future investigations which will be designed to answer these and other important considerations in the management of glaucoma Alon Harris MS PhD FARVO Director of Clinical Research Lois Letzter Professor of Ophthalmology Professor of Cellular and Integrative Physiology
