Mathematics Teachers at Work Janine T. Remillard,Beth A. Herbel-Eisenmann,Gwendolyn M. Lloyd,2011-09-20 This book compiles and synthesizes existing research on teachers use of mathematics curriculum materials and the impact of curriculum materials on teaching and teachers with a particular emphasis on but not restricted to those materials developed in the 1990s in response to the NCTM s Principles and Standards for School Mathematics Despite the substantial amount of curriculum development activity over the last 15 years and growing scholarly interest in their use the book represents the first compilation of research on teachers and mathematics curriculum materials and the first volume with this focus in any content area in several decades **Numerical Algebra** John Todd,2014-05-10 Basic Numerical Mathematics Volume II

Numerical Algebra focuses on numerical algebra with emphasis on the ideas of controlled computational experiments and bad examples The existence of an orthogonal matrix which diagonalizes a real symmetric matrix is highlighted and partitioned or block matrices are discussed along with induced norms and inversion problems Comprised of 12 chapters this volume begins with an overview of the manipulation of vectors and matrices followed by an analysis of induced norms The reader is then introduced to the direct solution of the inversion problem first in the context of theoretical arithmetic that is when round off is disregarded and second in the context of practical computation Various methods of handling the characteristic value problems are also considered together with several iterative methods for the solution of a system of linear equations Two applications are described the solution of a two point boundary value problem and the solution of least squares curve fitting The book concludes with an account of the singular value decomposition and pseudo inverses This monograph will be of interest to mathematicians and students of mathematics *Asymptotics and Special Functions* Frank Olver,1997-01-24 A classic reference intended for graduate students mathematicians physicists and engineers this book can be used both as the basis for instructional courses and as a reference tool *Learn Science, Learn Math, Learn to Teach*

Expander Families and Cayley Graphs Mike Krebs,Anthony Shaheen,2011-10-21

Expander families enjoy a wide range of applications in mathematics and computer science and their study is a fascinating one in its own right Expander Families and Cayley Graphs A Beginner s Guide provides an introduction to the mathematical theory underlying these objects The central notion in the book is that of expansion which roughly means the quality of a graph as a communications network Cayley graphs are certain graphs constructed from groups they play a prominent role in the study of expander families The isoperimetric constant the second largest eigenvalue the diameter and the Kazhdan constant are four measures of the expansion quality of a Cayley graph The book carefully develops these concepts discussing their relationships to one another and to subgroups and quotients as well as their best case growth rates Topics include graph spectra i e eigenvalues a Cheeger Buser type inequality for regular graphs group quotients and graph coverings subgroups and Schreier generators the Alon Boppana theorem on the second largest eigenvalue of a regular graph Ramanujan graphs diameter estimates for Cayley graphs the zig zag product and its relation to semidirect products of groups eigenvalues of Cayley graphs Paley graphs and Kazhdan constants The book was written with undergraduate math majors in

mind indeed several dozen of them field tested it The prerequisites are minimal one course in linear algebra and one course in group theory No background in graph theory or representation theory is assumed the book develops from scratch the required facts from these fields The authors include not only overviews and quick capsule summaries of key concepts but also details of potentially confusing lines of reasoning The book contains ideas for student research projects for capstone projects REUs etc exercises both easy and hard and extensive notes with references to the literature
