

Clients have the right to make decisions about their care based on complete information about the procedure, which includes the benefits and risks. Therefore, it is important for the nurse to make sure the consent form is signed by the client prior to initiating the blood administration. The client is alert and oriented. Therefore, her sister does not have the legal authority to sign the consent form for her.

INCORRECT

Scenario

Nurse Esther is ready to administer the first unit of packed RBCs.

Question

Identify the correct sequence of actions for blood administration after Nurse Esther performs hand hygiene and applies gloves. (Reorder the steps by dragging them into the desired sequence.)

Selected Option

1.Spike and prime the Y-set tubing with the 0.9% sodium chloride solution. 2.Attach the tubing to the IV catheter and begin to infuse the 0.9% sodium chloride solution. 3.Gently rotate the bag of packed RBCs. 4.Turn off the 0.9% sodium chloride solution. 5.Attach the packed RBCs bag to the Y-set tubing. 6.Begin to infuse the packed RBCs.

Rationale

The first action the nurse should do is insert one of the spikes of the Y-set into the 0.9% sodium chloride solution bag, prime the tubing with the 0.9% sodium chloride solution, and start slowly infusing the solution into the client's IV. Next, the nurse should gently rotate the bag to mix the blood cells with the plasma. Then, the nurse should spike the blood bag with the remaining spike on the Y-set tubing and turn off the 0.9% sodium chloride solution by closing the clamp. Lastly, the nurse needs to open the clamp to allow the blood to infuse.

BEST ANSWERBest Decision

Scenario

Ms. Lieberman is restless, her face is flushed, and she reports having a headache.

Question

Nurse Esther notes Ms. Lieberman is restless, her face is flushed, and she reports having a headache. Her vital signs include: temperature 38.8° C (101.8° F), pulse 96/min, respirations 22/min, and BP 103/60 mm Hg. Which of the following is an appropriate action for Nurse Esther to take?

Selected Option

Stop the blood transfusion.

Rationale

In the presence of a febrile reaction, the client's blood is sensitive to some component of the donor's blood. To prevent further exposure to the sensitizing component, the transfusion should be stopped immediately.

Essay Response

Scenario

Using an SBAR format, write the information Nurse Esther should give to Ms. Lieberman's provider when calling about her response to the blood. Refer to the EMR documents for needed information.

Question

Using an SBAR format, write the information Nurse Esther should give to Ms. Lieberman's provider when calling about her response to the blood. Refer to the EMR documents for needed information. (Enter your response, then click on the submit button at the bottom of the screen. Compare your response to the one provided.)

Selected Option

Sbar

Rationale

The following information should be shared with Ms. Lieberman's provider when calling about her response to the blood. Situation: Dr. McGuire, this is Esther - RN. I am taking care of Ms. Lieberman in room 5206. She is a 36-year-old client admitted from the ED today for a GI bleed. She's had one unit of packed RBCs and part of the second unit of blood. I stopped the second unit because I believe she is having a transfusion reaction. Her baseline temperature was 98.6 and is now 101.8. Ms. Lieberman reports having a headache, chills, and is restless. She does not have any evidence of a rash at this time. Background: Ms. Lieberman has a history of Crohn's disease and intermittent gastritis. Six months ago she had an ileostomy and started on infliximab IV every 8 weeks. Her last infusion was 7 weeks ago. Assessment: Her hemoglobin was 7 g/dL and her hematocrit was 21% in the ED. When she arrived to the medical surgical unit, her BP was 94/56 and her pulse 110, but now her BP is 110/70 and her pulse is 110. At
