

## Leadership Proctored ATI Study Guide

---

### Leadership Styles

- **Authoritarian/Autocratic**
  - Decisions made with little input from the team, leader dictates instructions
  - Leads to mistrust and high turn-over
  - This style may be useful in emergency situations
- **Laissez-Faire**
  - **Hands off approach**
  - Leader allows team to make decisions for themselves with no direction
  - Leads to low productivity and frustration
  - **Laissez Faire=Lazy**
- **Democratic**
  - Leader and team work together towards goals and outcomes
  - Promotes group satisfaction, but may slow decision making
- **Transactional**
  - Focused on current work completion, **rewards for finishing tasks**, and consequences for delayed tasks
  - May lack big picture thought
- **Transformational**
  - Promotes teamwork and shared decision making
  - Leader is respected and trustworthy
  - **Ideal Style**

---

### Acute vs. Chronic

- New onset symptoms take priority over symptoms associated with a chronic illness.
- Example
  - A patient with a long bone fracture with sudden onset of chest pain and dyspnea takes priority over a COPD patient with an SpO2 of 89% (common for this disorder)
- Common words that represent **Acute**
  - **New Onset, Sudden**

---

### Unexpected vs. Expected

- Unexpected findings take priority over S/S that are expected for a patient's diagnosis
- Example
  - A diabetic patient with a blood sugar reading of 40 mg/dL takes priority over a patient with appendicitis complaining of RLQ pain (expected with this diagnosis)

---

### Restrictive/Invasive Procedures

- Begin with the least restrictive or invasive interventions
  - Example 1
    - For a confused patient at risk for falls, provide a sitter (non-restrictive) instead of applying restraints (restrictive)
  - Example 2
    - For a patient having difficulty urinating, try pouring warm water over the perineum (non-invasive) before inserting a urinary catheter (invasive)
-
