Physico-chemical Aspects of Textile Coloration Stephen M. Burkinshaw, 2016-02-08 The production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products As the great majority of such products are coloured

predominantly using aqueous dyeing processes the coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to the various types of textile material The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres Physico Chemical Aspects of Textile Coloration provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural man made and synthetic fibres with the principal types of dye The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing dyeing as an area of study as well as the terminology employed in dyeing technology and science contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres polyester polyamide wool polyacrylonitrile and silk fibres non aqueous dyeing as represented by the use of air organic solvents and supercritical CO₂ fluid as alternatives to water as application medium The up to date text is supported by a large number of tables figures and illustrations as well as footnotes and widespread use of references to published work The book is essential reading for students teachers researchers and professionals involved in textile coloration

P.W. Atkins, C.A. Trapp, M.P. Cady, C. Giunta, 2009-02 Oral Processing and Consumer Perception Bettina Wolf, Serafim Bakalis, Jianshe Chen, 2022-01-18 This is the first book for some years that provides a comprehensive overview of food oral processing It includes fundamental chapters at the beginning of each section to aid the understanding of the later more specific oral processing chapters The field is rapidly developing and the systems researched in the context of food oral processing become increasingly complex and therefore the fundamental sections include information on how to build complex food systems The main coverage includes the biomechanics of swallowing the biophysics of mouthfeel and texture as well as the biochemistry of flavours and how food microstructures can be manipulated It contains up to date research findings looking at consumer preferences and the response to these preferences by food process technologists and those developing new foods The book will be of interest to postgraduate students and researchers in academia and industry who may be from very diverse backgrounds ranging from food process engineers to functional food developers and professionals concerned with swallowing and taste disorders , Understanding Voltammetry Richard G Compton, Craig E Banks, the power of electrochemical measurements in respect of thermodynamics kinetics and analysis is widely recognised but the

subject can be unpredictable to the novice even if they have a strong physical and chemical background especially if they wish to pursue quantitative measurements Accordingly some significant experiments are perhaps wisely never attempted while the literature is sadly replete with flawed attempts at rigorous voltammetry This textbook considers how to implement designing explaining and interpreting experiments centered on various forms of voltammetry cyclic microelectrode hydrodynamic etc The reader is assumed to have knowledge of physical chemistry equivalent to Master s level but no exposure to electrochemistry in general or voltammetry in particular While the book is designed to stand alone references to important research papers are given to provide an introductory entry into the literature The third edition contains new material relating to electron transfer theory experimental requirements scanning electrochemical microscopy adsorption electroanalysis and nanoelectrochemistry

Nanoscience and Nanotechnology, Proceedings of the INFN-LNF 2018 Conference Stefano Bellucci,2020-01-03 The results presented in this volume highlight some of the most recent advances in nanoscience and nanotechnology studies from both the physical and chemical point of view with an eye also to possible engineering applications These studies demonstrate directly how effective and at the same time stimulating is implementing the cross fertilization procedure Indeed multidisciplinary research allows one to catch more easily the analogies inherent different areas of science as well as to take advantage and optimize different methods and techniques often borrowed from other research areas In the present Special Issue we included six published papers The latter contributions on the one hand are developed at the theory level and on the other hand show experimental results on the realization and experimental characterization of nanostructured systems suitable for yielding progress towards the realization of systems and devices that can ultimately lead to industrial applications The results show that recent scientific research advances in these areas may provide important steps in the direction of fostering innovation and technological development
