Accompanied by A Comprehensive Companion Web site *Hyperlipidemia Management for Primary Care* Brian V. Reamy, 2009-03-01 One of the possible benefits of 30 years of medical practice is the ability to develop some sense of perspective with regard to major transitions in medicine. Many physicians who graduated from medical school in the mid to late 1970s may recall feeling less than comfortable about counseling patients regarding lifestyle modification and heart disease risk. A total cholesterol of 250 mg% at that time was considered within normal limits. The best information on the causation of heart disease came from epidemiologic data showing associations between increased consumption of dairy products and fat in the industrialized countries of northern Europe and America and a corresponding increase in morbidity and mortality from heart disease as compared to other countries that were less well developed or as compared to Mediterranean countries where there was a different type of diet lower in saturated fats and cholesterol. Treatment options in those days were based more on anecdotal information and observation than on evidence. The idea that coronary artery disease was an inflammatory problem in which the main culprit was oxidized LDL and the idea that heart disease risk could be managed had not yet made the transition to clinical practice. This attitude all changed as information from the largest and longest running prospective epidemiologic study on heart disease the Framingham Study began publishing data on causality and risk factors **Clinical Chemistry: Principles, Techniques, and Correlations, Enhanced Edition** Michael L. Nutrition and Diet Therapy Sue Rodwell Williams, 1969 *Handbook of Stroke Prevention in Clinical Practice* Karen L. Furie, Peter J. Kelly, 2004-04-28 Despite major advances in the understanding of stroke mechanisms that have occurred over the past quarter century stroke continues to rank among the leading causes of death and disability worldwide Although currently it may be difficult to believe early doubts were expressed as to whether interventions in risk factors for either coronary disease or stroke would actually lead to a reduction in the incidence of these disorders However large clinical trials in hypertension carotid disease atrial fibrillation and antithrombotic and antiplatelet therapies have effectively demonstrated the efficacy of these targeted interventions in reducing stroke incidence More recently after earlier uncertainty regarding the role of elevated lipids as a risk factor for stroke clinical trials of the statins have also demonstrated a significant reduction in the incidence of ischemic stroke However as emphasized in *Handbook of Stroke Prevention in Clinical Practice* despite these gains and the initial decline in stroke incidence that did occur in the 1960s and 1970s the incidence of stroke disappointingly has failed to show a further significant decline since that time The editors of *Handbook of Stroke Prevention in Clinical Practice* raise the very important question of whether recognized strategies for stroke prevention have been widely or effectively implemented They correctly emphasize the critical importance of identifying the mechanism of stroke in each patient so as to properly direct prevention and treatment As Dr Hyperlipidemias: New Insights for the Healthcare Professional: 2013 Edition, 2013-07-22 *Hyperlipidemias New Insights for the Healthcare Professional 2013 Edition* is a ScholarlyBrief that delivers timely authoritative comprehensive and specialized information about Genetics in a concise format The editors have built *Hyperlipidemias New Insights for the Healthcare Professional 2013 Edition* on the vast information databases of ScholarlyNews You can expect the information about Genetics in this book to be deeper than what you can access anywhere else as well as consistently reliable authoritative informed and relevant The content of
