Family-making Françoise Baylis, Carolyn McLeod, 2014 This volume explores the ethics of making or expanding families through adoption or technologically assisted reproduction For many people these methods are separate and distinct they can choose either adoption or assisted reproduction But for others these options blend together For example in some jurisdictions the path of assisted reproduction for same sex couples is complicated by the need for the partner who is not genetically related to the resulting child to adopt this child if she wants to become the child's legal parent The essays in this volume critically examine moral choices to pursue adoption assisted reproduction or both and highlight the social norms that can distort decision making Among these norms are those that favour people having biologically related children bionormativity or that privilege a traditional understanding of family as a heterosexual unit with one or more children where both parents are the genetic biological legal and social parents of these children As a whole the book looks at how adoption and assisted reproduction are morally distinct from one another but also emphasizes how the two are morally similar Choosing one the other or both of these approaches to family making can be complex in some respects but ought to be simple in others provided that one's main goal is to become a parent

How to get Philosophy

Students Talking Andrew Fisher, Jonathan Tallant, 2015-10-08 Engaging undergraduate students and instigating debate within philosophy seminars is one of the greatest challenges faced by instructors on a daily basis How to Get Philosophy Students Talking An Instructor s Toolkit is an innovative and original resource designed for use by academics looking to help students of all abilities get the most out of their time spent in group discussions Each chapter features thought experiments discussion questions and further readings on topics within the following core areas of philosophy Metaphysics Epistemology Philosophy of Mind Philosophy of Language Philosophy of Religion Philosophy of Science Political Philosophy Normative Ethics Applied Ethics Metaethics Aesthetics Group discussions and debates are a key part of undergraduate study and one of the best ways for students to learn and understand often complex philosophical theories and concepts This book is an essential toolkit for instructors looking to get the most out of their philosophy students *For the Sake of Argument* Robert M. Martin, 2016-11-15 Academic philosophy can be puzzling to newcomers The conventions terms and expectations entrenched among philosophers aren t always clear from the outside Why are philosophers so preoccupied with finding the truth doesn t everyone have their own philosophy Is philosophy so deep and difficult that its literature has to be incomprehensible What kinds of arguments can there be for a philosophical position Where does the evidence come from Why is there so much jargon wouldn t it be better to do away with it altogether Best selling author and retired philosophy professor Robert Martin answers these questions and many more offering a practical guide to arguing and writing philosophically Anecdotes jokes asides digressions oddments and entertainments are included throughout resulting in an informal introduction that doesn t shy away from the nuts and bolts of philosophical argument *Well-Being in the Information Society. Fighting Inequalities* Hongxiu Li, Ágústa Pálsdóttir, Roland Trill, Reima Suomi, Yevgeniya Amelina, 2018-08-13 This book constitutes the refereed proceedings of the 7th International Conference on Well Being in the Information Society WIS 2018 held in Turku Finland in August 2018 The 19 revised full papers presented were carefully reviewed and selected from 42 submissions With the core topic Fighting Inequalities WIS 2018 focused on innovations and fresh ideas in the cross section of information society and health as understood in a wide sense The papers presented in this volume are organized along the following broad topics digital society and e health *Debating African Philosophy* George Hull, 2018-11-21 In African countries there has been a surge of intellectual interest in foregrounding ideas and thinkers of African origin in philosophy as in other disciplines that have been unjustly ignored or marginalized African scholars have demonstrated that precolonial African cultures generated ideas and arguments which were at once truly philosophical and distinctively African and several contemporary African thinkers are now established figures in the philosophical mainstream Yet despite the universality of its themes relevant contributions from African philosophy have rarely permeated global philosophical debates Critical intellectual excavation has also tended to prioritize precolonial thought overlooking more recent sources of home grown philosophical thinking such as Africa s intellectually rich liberation movements This book

demonstrates the potential for constructive interchange between currents of thought from African philosophy and other intellectual currents within philosophy Chapters authored by leading and emerging scholars recover philosophical thinkers and currents of ideas within Africa and about Africa bringing them into dialogue with contemporary mainstream philosophy foreground the relevance of African theorizing to contemporary debates in epistemology philosophy of language moral political philosophy philosophy of race environmental ethics and the metaphysics of disability make new interventions within on going debates in African philosophy consider ways in which philosophy can become epistemically inclusive interrogating the contemporary call for decolonization of philosophy Showing how foregrounding Africa its ideas thinkers and problems can help with the project of renewing and improving the discipline of philosophy worldwide this book will stimulate and challenge everyone with an interest in philosophy and is essential reading for upper level undergraduate students

postgraduate students and scholars of African and Africana philosophy **Debating Surrogacy** Anca Gheaus,Christine Straehle,2024 Offering a for and against look at surrogacy this book focuses on questions which bear on its justifiability Is providing gestational services a permissible way of employing a woman s body Indeed is it a legitimate form of work Are the children born out of surrogacy in any way wronged by surrogacy agreements *Debating Procreation* David Benatar,David Wasserman,2015 While procreation is ubiquitous attention to the ethical issues involved in creating children is relatively rare In *Debating Procreation* David Benatar and David Wasserman take opposing views on this important question David Benatar argues for the anti natalist view that it is always wrong to bring new people into existence He argues that coming into existence is always a serious harm and that even if it were not always so the risk of serious harm is sufficiently great to make procreation wrong In addition to these philanthropic arguments he advances the misanthropic one that because humans are so defective and cause vast amounts of harm it is wrong to create more of them David Wasserman defends procreation against the anti natalist challenge He outlines a variety of moderate pro natalist positions which all see procreation as often permissible but never required After criticizing the main anti natalist arguments he reviews those pronatalist positions He argues that constraints on procreation are best understood in terms of the role morality of prospective parents considers different views of that role morality and argues for one that imposes only limited constraints based on the well being of the future child He then argues that the expected good of a future child and of the parent child relationship can provide a strong justification for procreation in the face of expected adversities without giving individuals any moral reason to procreate

Bioethics Critically Reconsidered H. Tristram Engelhardt, 2011-11-19 Bioethics developed as an academic and clinical discipline during the later part of the 20th century due to a variety of factors Crucial to this development was the increased secularization of American culture as well as the dissolution of medicine as a quasi guild with its own professional ethics In the context of this moral vacuum bioethics came into existence Its raison d'être was opposition to the alleged paternalism of the medical community and traditional moral frameworks yet at the same time it set itself up as a source of moral authority with respect to biomedical decision making Bioethics serves as biopolitics in so far as it attempts to make determinations about how individuals ought to make medical decisions and then attempts to codify that in law Progressivism and secularism are ultimately the ideology of bioethics

Evolutionary Concept of Health Dr Mahesh Ananth, 2012-10-01 One of the most controversial contemporary debates on the concept of health is the clash between the views of naturalists and normativists Naturalists argue that although health can be valued or disvalued the concept of health is itself objective and value free In contrast normativists argue that health is a contextual and value laden concept and that there is no possibility of a value free understanding of health This debate has fueled many of the often very acrimonious disputations arising from the claims of health disease and disability activists and charities and the public policy responses to them In responding to this debate Ananth both surveys the existing literature with special focus on the work of Christopher Boorse and argues that a naturalistic concept of health drawing on evolutionary considerations associated with biological function homeostasis and species design is defensible without jettisoning norms in their entirety *Empirical Philosophy of Science* Susann Wagenknecht, Nancy J. Nersessian, Hanne Andersen, 2015-06-12 The book examines the emerging approach of using qualitative methods such as interviews and field observations in the philosophy of science Qualitative methods are gaining popularity among philosophers of science as more and more scholars are resorting to empirical work in their study of scientific practices At the same time the results produced through empirical work are quite different from those gained through the kind of introspective conceptual analysis more typical of philosophy This volume explores the benefits and challenges of an empirical philosophy of science and addresses questions such as What do philosophers gain from empirical work How can empirical research help to develop philosophical concepts How do we integrate philosophical frameworks and empirical research What constraints do we accept when choosing an empirical approach What constraints does a pronounced theoretical focus impose on empirical work Nine
