Kerridwen Mangala McNamara, 2023-11-10 We all worry about our kids learning math Even if the kids are in school there is always a concern Sometimes it is about the kid's concern sometimes it is about their teacher's concern parent teacher or otherwise But a lot of the time it is about US It is about our own math phobias those fears dislikes or aversions that we picked up from our own math experiences and that we inadvertently pass on to our kids We don't want them to be afraid of math we know that limits their opportunities and makes their lives harder and costs them more money but we just can't help it This book is here to help you deal with your own math phobias and come to if not outright enjoy math to at least appreciate it and be able to convey it to your kids without passing on the fear Kerridwen Mangala McNamara is NOT a math lover but she is a math appreciator and has worked through most of these issues herself Let her help you along your homeschooling journey and show you how to fight the Fear of Math monster so that it no longer intimidates you or your kids *Revealing*

Arithmetic Katherine Hannon, 2021-04-12 For years Christian math books have looked basically like secular textbooks with the addition of a Bible verse here or there Here at last is a book to help you transform your math class and show your child God's handiwork in math *Revealing Arithmetic* will help you Teach math from a biblical worldview Worship the Lord in math Help your child really understand concepts Train your child to think mathematically Transform everyday activities and objects into math lessons Teach your child to use math as a real life tool Explore historical methods and symbols This book is designed for homeschool parents needing a simple math guide to use alongside their curriculum and help them teach arithmetic to elementary students older students needing a review of math basics before moving on to advanced mathematics or Christian school or co-op teachers or future teachers wanting ideas on how to modify the curriculum to better reveal the truth of a Creator God **Using Children's Literature in Math and Science**, 1997 *What Children Can Teach Adults*

About Mathematics Robert P Hunting, 2013-10-29 Ways adults think about mathematics and the ways children think about mathematics are not necessarily the same Listening observing and talking with children is necessary so that teachers parents and carers can figure out where they are coming from mathematically If children's mathematics encompasses their own meanings and understandings and those meanings and understandings may be different to mine then to provide effective assistance and support I must make every effort to see mathematics from their perspective In this book I highlight important aspects of children's beginning understandings of mathematics illustrated with examples taken from observations of children In Chapter 1 I discuss the origins of mathematics in infants with illustrations provided from three major strands of mathematics number space and measurement In Chapter 2 I give examples of different ways young children use fingers in their efforts to solve simple mathematical problems looking in detail at one child's behavior Chapter 3 focuses on a 4 year old

s views about numbers There is a commonly held belief that before children start school they have not really thought about numbers that young children s mathematical minds are a blank slate Nothing could be further from the case In Chapter 4 I discuss the topic of counting focusing firstly on the spontaneous counting behavior of a 4 year old followed by interviews that further reveal how his knowledge of numbers and counting are related Chapter 5 further discusses how children learn about numbers in particular the various conceptions children have of the number 10 I explain the significance of part whole knowledge in children s numerical thinking in Chapter 6 with examples taken from preschool the 2nd grade and 5th grade Chapter 7 is about sharing its origins contexts when sharing arises types of sharing and the relationship between sharing and counting sharing and division and sharing as a platform for learning fractions In Chapter 8 I begin by discussing early geometric ideas including basic operations for moving items in two dimensions followed by three dimensional activities I discuss the key notion of conservation of quantity and conclude with comments about scale and distance Chapter 9 begins with the question What is measurement I discuss the issue of measurement error then sketch out a general development of measurement thinking Types of conservation are described as are unit systems Finally children s thinking in area situations including common misconceptions are discussed In Chapter 10 after a story showing how fractions can be introduced naturally I focus on the fraction knowledge of an 11 year old who responded to a range of tasks designed to tease out this child s conceptual understanding of fractions
