Algebraic Codes On Lines Planes And Curves An Engineering Approach:

Algebraic Codes on Lines, Planes, and Curves Richard E. Blahut,2008-04-03 The past few years have witnessed significant developments in algebraic coding theory This book provides an advanced treatment of the subject from an engineering perspective covering the basic principles and their application in communications and signal processing Emphasis is on codes defined on the line on the plane and on curves with the core ideas presented using commutative algebra and computational algebraic geometry made accessible using the Fourier transform Starting with codes defined on a line a background framework is established upon which the later chapters concerning codes on planes and on curves are developed The decoding algorithms are developed using the standard engineering approach applied to those of Reed Solomon codes enabling them to be evaluated against practical applications Integrating recent developments in the field into the classical treatment of algebraic coding this is an invaluable resource for graduate students and researchers in telecommunications and applied mathematics **Codes, Cryptology and Curves with Computer Algebra** Ruud Pellikaan,Xin-Wen Wu,Stanislav Bulygin,Relinde Jurrius,2017-11-02 Graduate level introduction to error correcting codes which are used to protect digital data and applied in public key cryptosystems *Advances in Algebraic Geometry Codes* Edgar Martinez-Moro,2008 Advances in Algebraic Geometry Codes presents the most successful applications of algebraic geometry to the field of error correcting codes which are used in the industry when one sends information through a noisy channel The noise in a channel is the corruption of a part of the information due to either interferences in the telecommunications or degradation of the information storing support for instance compact disc An error correcting code thus adds extra information to the message to be transmitted with the aim of recovering the sent information With contributions from renowned researchers this pioneering book will be of value to mathematicians computer scientists and engineers in information theory Algebraic Codes for Data Transmission Richard E. Blahut,2003-02-06 The need to transmit and store massive amounts of data reliably and without error is a vital part of modern communications systems Error correcting codes play a fundamental role in minimising data corruption caused by defects such as noise interference crosstalk and packet loss This book provides an accessible introduction to the basic elements of algebraic codes and discusses their use in a variety of applications The author describes a range of important coding techniques including Reed Solomon codes BCH codes trellis codes and turbocodes Throughout the book mathematical theory is illustrated by reference to many practical examples The book was first published in 2003 and is aimed at graduate students of electrical and computer engineering and at practising engineers whose work involves communications or signal processing **Choice** ,2009 **Books in Print Supplement** ,2002 *Which Degree in Britain* ,1999 A comprehensive guide to full time degree courses institutions and towns in Britain **Mathematical Reviews** ,2002 **Index to Theses with Abstracts Accepted for Higher Degrees by the Universities of Great Britain and Ireland and the Council for National Academic**

Awards ,2007 *The American Mathematical Monthly* ,1977 **Index of the American Mathematical Monthly** Kenneth Ownsworth May,1977 **Scientific and Technical Aerospace Reports** ,1970 *Subject Guide to Books in Print* ,1971 Dissertation Abstracts International ,1995 **Forthcoming Books** Rose Arny,2002 Index to IEEE Publications Institute of Electrical and Electronics Engineers,1975 Issues for 1973 cover the entire IEEE technical literature **Science Citation Index** ,1992 Vols for 1964 have guides and journal lists **Applications of Algebraic Geometry to Coding Theory, Physics and Computation** Ciro Ciliberto,Friedrich Hirzebruch,Rick Miranda,Mina Teicher,2001-08-31 Proceedings of the NATO Advanced Research Workshop held in Eilat Israel from 25th February to 1st March 2001 Codes and Algebraic Curves Oliver Pretzel,1998-01-08 The geometry of curves has fascinated mathematicians for 2500 years and the theory has become highly abstract Recently links have been made with the subject of error correction leading to the creation of geometric Goppa codes a new and important area of coding theory This book is an updated and extended version of the last part of the successful book Error Correcting Codes and Finite Fields It provides an elementary introduction to Goppa codes and includes many examples calculations and applications The book is in two parts with an emphasis on motivation and applications of the theory take precedence over proofs of theorems The formal theory is however provided in the second part of the book and several of the concepts and proofs have been simplified without sacrificing rigour *Codes on Algebraic Curves* Serguei A. Stepanov,2012-12-06 This is a self contained introduction to algebraic curves over finite fields and geometric Goppa codes There are four main divisions in the book The first is a brief exposition of basic concepts and facts of the theory of error correcting codes Part I The second is a complete presentation of the theory of algebraic curves especially the curves defined over finite fields Part II The third is a detailed description of the theory of classical modular curves and their reduction modulo a prime number Part III The fourth and basic is the construction of geometric Goppa codes and the production of asymptotically good linear codes coming from algebraic curves over finite fields Part IV The theory of geometric Goppa codes is a fascinating topic where two extremes meet the highly abstract and deep theory of algebraic specifically modular curves over finite fields and the very concrete problems in the engineering of information transmission At the present time there are two essentially different ways to produce asymptotically good codes coming from algebraic curves over a finite field with an extremely large number of rational points The first way developed by M A Tsfasman S G Vladut and Th Zink 210 is rather difficult and assumes a serious acquaintance with the theory of modular curves and their reduction modulo a prime number The second way proposed recently by A
