Summers, 2023-11-21 The Scientific Revolution began with the publication of Copernicus heliocentric theory describing the Sun as the center of our solar system and all the known Universe That revolutionary idea began a rethinking of our place in the Universe and no longer were the affairs of humanity considered as the centerpiece of all that was known

In the past century with the advent of the theories of Special and General Relativity the Copenhagen interpretation of quantum theory and a more sophisticated conception of living system dynamics there has been a new understanding of the central role of the observer or experiencer in the determination of natural phenomena and the actualization of reality Modern advancements in information theory semiotics and consciousness studies have also led to a better comprehension of the relationship between 1st person and 3rd person perspectives and the limits of the Scientific Method Science and religion have always had the common goal of trying to further our understanding of the world and its meaning for us This book explores a possible return of science to a role as natural philosophy and a pathway to better understanding our place in the Universe

Semialgebraic Statistics and Latent Tree Models Piotr Zwiernik, 2015-08-21 The first part of the book gives a general introduction to key concepts in algebraic statistics focusing on methods that are helpful in the study of models with hidden variables The author uses tensor geometry as a natural language to deal with multivariate probability distributions develops new combinatorial tools to study models with hidden data and describes the semialgebraic structure of statistical models The second part illustrates important examples of tree models with hidden variables The book discusses the underlying models and related combinatorial concepts of phylogenetic trees as well as the local and global geometry of latent tree models It also extends previous results to Gaussian latent tree models This book shows you how both combinatorics and algebraic geometry enable a better understanding of latent tree models It contains many results on the geometry of the models including a detailed analysis of identifiability and the defining polynomial constraints
