Leron,2013-12-01 Most students in abstract algebra classes have great difficulty making sense of what the instructor is saying Moreover this seems to remain true almost independently of the quality of the lecture This book is based on the constructivist belief that before students can make sense of any presentation of abstract mathematics they need to be engaged in mental activities which will establish an experiential base for any future verbal explanation No less they need to have the opportunity to reflect on their activities This approach is based on extensive theoretical and empirical studies as well as on the substantial experience of the authors in teaching astract algebra The main source of activities in this course is computer constructions specifically small programs written in the mathlike programming language ISETL the main tool for reflections is work in teams of 2 4 students where the activities are discussed and debated Because of the similarity of ISETL expressions to standard written mathematics there is very little programming overhead learning to program is inseparable from learning the mathematics Each topic is first introduced through computer activities which are then followed by a text section and exercises This text section is written in an informed discusive style closely relating definitions and proofs to the constructions in the activities Notions such as cosets and quotient groups become much more meaningful to the students than when they are preseted in a lecture **Principles of Mathematics Book 1 Teacher Guide** Katherine

Loop,2016-08-05 Teacher Guide for Book 1 of the Principles of Mathematics Biblical Worldview Curriculum for junior high Math is a real life tool that points us to God and helps us explore His creation yet it often comes across as dry facts and meaningless rules Here at last is a curriculum that has a biblical worldview integrated throughout the text and problems not just added as an afterthought The resources in the Teacher Guide will help students master and apply the skills learned in the Student Textbook What does this Teacher Guide include Worksheets Quizzes and Tests These perforated three hole punched pages help provide practice on the principles taught in the main student textbook Answer Keys The answers are included for the worksheets quizzes and tests found in this Teacher Guide Schedule A suggested calendar schedule is

provided for completing the material in one year though this can be adapted to meet individual student needs There is also an accelerated schedule for completing the material in one semester Are there any prerequisites for this course This curriculum is aimed at grades 6 8 fitting into most math approaches the year or two years prior to starting high school algebra If following traditional grade levels Book 1 should be completed in grade 6 or 7 and Book 2 in grade 7 or 8 In Book 1 students should have a basic knowledge of arithmetic basic arithmetic will be reviewed but at a fast pace and while teaching problem solving skills and a biblical worldview of math and sufficient mental development to think through the concepts and examples given Typically anyone in sixth grade or higher should be prepared to begin The focus of the course is actually learning math for life not simply preparing to pass a test
