Biochemistry and Molecular Biology of Vitamin B6 and PQQ-dependent Proteins Ana J. Iriarte, Herbert M. Kagan, Marino Martinez-Carrion, 2012-12-06 Since the first international meeting on Vitamin B6 involvement in catalysis took place in 1962 there have been periodic meetings every three or four years In 1990 scientists studying another cofactor PQQ which had already attracted the scientific community's interest for its possible involvement in amino acid decarboxylation and reactions involving amino groups joined forces with those investigating pyridoxal phosphate dependent enzymes Since then the international PQQ quinoproteins meetings have been held jointly In the years following the original meeting 37 years ago in Rome Italy the scientific gatherings have taken place in Moscow Russia 1966 Nagoya Japan 1967 Leningrad St Petersburg Russia 1974 Toronto Canada 1979 Athens Greece 1983 Turku Finland 1987 Osaka Japan 1990 and Capri Italy 1996 For the first time in the history of these symposia the international meeting was held in the United States from October 31 through November 5 1999 in Santa Fe New Mexico The scientific program focus shifted significantly beyond the original emphasis on catalysis to aspects such as cellular and genetic regulation of events involving proteins that require pyridoxal phosphate or quinoproteins The growing awareness of the involvement of these proteins in biotechnology processes and fundamental physiological events as well as their implication in diseases was also represented with emphasis on the molecular basis of these events The meeting was symposium S278 sponsored by the International Union of Biochemistry and Molecular Biology IUBMB

Next Generation Therapeutic Modality to Cure Autoimmune Diseases Ce Wang, Guobao Chen, Qi Wan, Feng Dong, Timothy Radstake, Asif Amin Dar, Sergio Piñ Piñeiro, 2025-08-07 Autoimmune diseases represent a significant medical challenge where the body's immune system mistakenly attacks its own tissues leading to chronic inflammation and serious health ramifications The traditional treatment regime generally suppresses the immune system broadly offering only symptomatic relief and increasing susceptibility to infections However recent strides in understanding the immune system coupled with breakthroughs in technology have sparked a new wave of treatments aimed at specific pathogenic pathways to restore balance and potentially offer a lasting cure without compromising overall immune function This research topic aims

to explore the spectrum of innovative therapies that specifically target critical components driving disease progression in autoimmune conditions We aim to highlight recent advancements in technologies such as CAR T therapies targeted protein degradation and nucleotide based therapies which hold the promise of drug free remission and potential cures by focusing precisely on pathogenic cells without overall immune suppression
