Active Learning For Ones Active Learning Series:

Active Learning for Ones Debby Cryer,1987 This publication has over 300 activities for children 12-24 months old. The activities are easy to read and do with one child or a small group. *Active Learning* Sílvia Manuel Brito,2019-10-02 Active learning is now a form of learning that accompanies the knowledge evolution that challenges the learner to promote it but also encourages him to investigate and become emotionally involved in the task. The great key to obtaining this behavior successfully depends therefore on the subject's involvement and ability to undertake so that active learning becomes emotional entrepreneurial learning that generates new ideas and new forms of knowledge. From memorization we move on to inquiry from questioning to constructive participation from hypostasis to problem solving from generalization to critical thinking. When we look at this book we see real examples, concrete and senses from the most important act of human nature: learning. *Active Learning: Theoretical Perspectives, Empirical Studies and Design Profiles* Robert Cassidy, Elizabeth S. Charles, James D. Slotta, Nathaniel Lasry,2019-07-11 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence-based pedagogies in higher education at something like a level approaching large-scale impact. By offering a communication venue that attracts and enhances much-needed partnerships among practitioners and researchers in pedagogical innovation, we aim to change the conversation and focus on how we work and learn together, i.e. extending the implementation and knowledge of co-design methods. In this first edition of our Research Topic on Active Learning, we highlight two of the three types of publications we wish to promote. First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community. These types of studies constitute the practice pull that we see as a necessary counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research-practitioner partnerships. Second are studies empirically examining the implementations of evidence-based designs in naturalistic settings and under naturalistic conditions. Interestingly, the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in-betweeners straddling the two worlds. As a result, these publications represent both the rigours of research and the pragmatism of reflective practice. In forthcoming editions, we will add to this collection a third type of publication: design profiles. These will present practitioner-developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners, instructional designers, and researchers alike. We hope by bringing these types of studies together in an open-access format that we may contribute to the development of new forms of practitioner-researcher interactions that promote co-design in pedagogical innovation. *How-to Guide for Active Learning* Alice Fornari, Ann Poznanski,2021-05-21 This book focuses on large and small group educational settings and offers brief strategies to engage learners to assure active learning strategies are core to the learning environment. The book opens with an introduction on active learning.

principles Each chapter follows with a specific description of a strategy written by authors who are experienced in using the strategy in a classroom environment with students The chapters are designed to be accessible and practical for the reader to apply in their learning environments

Around the Patient Bed Yoel Donchin, Daniel Gopher, 2013-10-16 The occurrence of failures and mistakes in health care from primary care procedures to the complexities of the operating room has become a hot button issue with the general public and within the medical community. Around the Patient Bed: Human Factors and Safety in Health Care examines the problem and investigates the tools to improve health care quality and safety from a human factors engineering viewpoint. The applied scientific field engaged in the interaction between the human operator functionary worker task requirements the governing technical systems and the characteristics of the work environment. The book presents a systematic human factors based proactive approach to the improvement of health care work and patient safety. The proposed approach delineates a more direct and powerful alternative to the contemporary dominant focus on error investigation and care providers accountability. It demonstrates how significant improvements in the quality of care and enhancement of patient safety are contingent on a major shift from efforts and investments driven by a retroactive study of errors incidents and adverse events to an emphasis on proactive human factors driven intervention and the development of corresponding conceptual approaches and methods for its systematic implementation. Edited by Yoel Donchin representing the medical profession and Daniel Gopher from the human factors engineering field the book brings together experts who have collaborated to present studies that reveal a wide range of problems and weaknesses of the contemporary health care system which impair safety and quality and increase workload. The book presents practical solutions based on human factors engineering components and cognitive psychology and explains their driving principles and methodologies. This approach provides tools to significantly reduce the number of errors creates a safe environment and improves the quality of health care.
