Understanding and Cultivating Well-being for the Pediatrician Sarah Webber, Jessica Babal, Megan A. Moreno, 2022-11-30 With growing attention surrounding the importance of physician well being organizations are institutionalizing physician well being efforts Promoting well being requires a understanding of the components barriers and promoters of physician well being While other books exist in this space many are focused on individual resilience building strategies or are too broad to apply to specific groups of physicians such as pediatricians A critical gap in the existing literature is a book that uses an evidence based model of well being and applying this model to unique experience of pediatricians Rather than a work centric approach the physician well being model we describe in this book takes a comprehensive approach to well being integrating evidence and expertise from a broad body of well being research and translating this knowledge to the lives and work of pediatricians Further while other texts focus on negative consequences of a lack of well being such as burnout this text is organized around defining understanding and optimizing well being Each chapter will provide strategies for both individual pediatricians and healthcare organizations to consider to improve pediatrician well being at their institution This book integrates well being science from disciplines outside of medicine offering innovative strategies to addressing this important issue This is a book designed for pediatricians health care leaders and organizations looking to better understand and implement strategies for pediatrician well being The authors will take readers on a journey through the history of physician well being leading to the current state of well being in the context of modern medical practice technology society policy and family life Using an integrated model of physician well being readers will learn about the current state solutions tensions and future directions of physician well being

Beyond Bias Centers of Disease Control, 2015 This first expert group meeting on the cultural contexts of health and well being was convened by the WHO Regional Office for Europe on 15 16 January 2015 As part of the adoption of Health 2020 the European policy for health and well being WHO Member States agreed to a measurement framework which would measure and report on objective and subjective well being However practical challenges remain particularly with respect to the influence of cultural factors on well being and well being measurement The aim of this meeting was to provide advice on how to consider the impact of culture on health and well being and how to communicate findings from well being data across such a culturally diverse region as Europe This report outlines the detailed recommendations made by the expert group in relation to each of these objectives

The Spirit of Global Health Simon Peng-Keller, Fabian Winiger, Raphael Rauch, 2022-07-21 Since the beginning of the World Health Organization many of its staff members regional offices member states and directors general have grappled with the question of what a spiritual dimension of health looks like and how it might enrich the health policies advocated by their organisations Contrary to the wide spread perception that spirituality is primarily related to palliative care and has emerged relatively recently within the organisation this study shows that its history is considerably longer and more complex and has been closely connected to the WHO's ethical aspirations its quest for more holistic and equitable healthcare and its struggle with the colonial legacy of international health organisations While such ideals and struggles silently motivated many of the key actors and policies such as the provision of universal primary healthcare which for decades have embodied the organisation's loftiest aspirations the WHO's official relationship with spirituality advanced in fits leaps and setbacks At times creative and interdisciplinary at others deeply political this process was marked by cycles of institutional forgetting and remembering Rather than as a triumph of religious lobbyists this book argues the spiritual dimension of health may be better understood as a ghost that has haunted and continues to haunt the WHO as it comes to terms with its mandate of advancing health as a state of complete well being available to all

Embodying Borders Laura Ferrero, Ana Cristina Vargas, Chiara Quagliariello, 2021-01-14 Based on extensive field research the essays in this volume illuminate the experiences of migrants from their own point of view providing a critical understanding of the complex social reality in which each experience is grounded Access to medical care for migrants is a fundamental right which is often ignored The book provides a critical understanding of the social reality in which social inequalities are grounded and offers the opportunity to show that right to health does not correspond uniquely with access to healthcare

optimal functioning of healthcare systems Although numerous observational studies highlight high rates of burnout among healthcare workers there has been little research to demonstrate effectiveness of interventions to support mental well being of healthcare workers during stressful times Investigation of potential resilience building interventions is especially important to prepare for the next pandemic or large scale disaster In addition robust evidence based guidelines and best practices are needed to reduce the high rates of burnout and promote wellbeing in healthcare workforce by integrating and addressing the full spectrum of occupational organizational social personal and psychological factors There are significant gaps in the existing literature including lack of prospective longitudinal intervention studies research focusing the needs of minority healthcare workers and identifying barriers to promote institutional wellbeing culture **Spirituality and Mental**
