## The Milky Way

The Milky Way is one of the observable universe's largest and most studied galaxies. It has a distinct barrel spiral shape, with a central bar-shaped region made up of older stars, gas, and dust, surrounded by a flat disk of younger stars, gas, and dust. The disk rotates around the centre and is estimated to contain hundreds of billions of stars and other celestial objects, including black holes, nebulae, and star clusters.

Our sun is one of the stars in the Milky Way and is located about 25,000 light years from the galactic centre in one of the spiral arms. The Milky Way is constantly changing, with new stars forming from the gas and dust in its disk and older stars dying and exploding as supernovae. The gravity from all of the stars and other objects in the Milky Way helps to keep the galaxy together and maintain its overall structure.

The study of the Milky Way provides valuable information about the structure and evolution of galaxies and the processes that govern the formation and behaviour of stars and other celestial objects. It also has important implications for our understanding of the universe and the laws of physics that govern it.

### Did you know?

The name "Milky Way" dates back to ancient times when different cultures knew it as a "river of milk" or "milksea of milk". In ancient Greece, the term

## Task - Drawing the

Here are steps to draw

1. Start by drawing a large circle to represent the disk of the Milky Way.
2. Draw a central bar-shaped region to represent the older stars, gas, and dust.
3. Add smaller spiral arms to represent the younger stars, gas, and dust.
4. To add more detail, draw some individual stars and other objects.
5. Use shading to give the Milky Way a three-dimensional look.
6. Finally, use an eraser to refine your drawing and remove any excess lines.

## Alpha Centauri

Alpha Centauri is a star system located 4.2 light years away from the Sun in the constellation Centaurus. It is the closest known star system to our solar system. Alpha Centauri is a binary star system composed of two stars, Alpha Centauri A and B, that orbit around a common centre of mass and a third star, Proxima Centauri. Alpha Centauri A and B are similar to our Sun and are in the final stages of their lives, while Proxima Centauri is a red dwarf star and is the closest known star to the Sun at a distance of approximately 4.2 light years. The Alpha Centauri system has been the subject of much scientific study and is considered a potential candidate for future interstellar missions.

## Light Years, Hours, and Minutes in Astronomical Units

A light year is a unit of astronomical distance equal to the distance that light travels in one year in a vacuum, which is approximately 9.5 trillion kilometres.

A light hour is a unit of distance equal to the distance that light travels in one hour, approximately 1.1 billion kilometres.

A light minute is a unit of distance equal to the distance that light travels in one minute, approximately 1.8 billion kilometres.

The distance between planets in our solar system are measured in astronomical units (AU), not light years, as they are very small compared to the vast distances in space. For example, the average distance between Earth and the Sun is about 150 million kilometres or 1 AU. It is not practical to talk about the distance between the planets in light years, as they are too small to measure.

### Did you know?

- Earth is approximately 150 million km away from the Sun.
- 1 AU is approximately 150 million km.
- 1 light minute is approximately 1.8 billion km.
- 1 light hour is approximately 1.1 billion km.
- 1 light year is approximately 9.5 trillion km.
