Natural Language Processing for Historical Texts Michael Piotrowski, 2022-05-31 More and more historical texts are becoming available in digital form Digitization of paper documents is motivated by the aim of preserving cultural heritage and making it more accessible both to laypeople and scholars As digital images cannot be

searched for text digitization projects increasingly strive to create digital text which can be searched and otherwise automatically processed in addition to facsimiles Indeed the emerging field of digital humanities heavily relies on the availability of digital text for its studies Together with the increasing availability of historical texts in digital form there is a growing interest in applying natural language processing NLP methods and tools to historical texts However the specific linguistic properties of historical texts the lack of standardized orthography in particular pose special challenges for NLP This book aims to give an introduction to NLP for historical texts and an overview of the state of the art in this field The book starts with an overview of methods for the acquisition of historical texts scanning and OCR discusses text encoding and annotation schemes and presents examples of corpora of historical texts in a variety of languages The book then discusses specific methods such as creating part of speech taggers for historical languages or handling spelling variation A final chapter analyzes the relationship between NLP and the digital humanities Certain recently emerging textual genres such as SMS social media and chat messages or newsgroup and forum postings share a number of properties with historical texts for example nonstandard orthography and grammar and profuse use of abbreviations The methods and techniques required for the effective processing of historical texts are thus also of interest for research in other domains

Coloured Petri Nets Kurt Jensen, 2013-04-17 This book presents a coherent description of the theoretical and practical aspects of Coloured Petri Nets CP nets or CPN It shows how CP nets have been developed from being a promising theoretical model to being a full fledged language for the design specification simulation validation and implementation of large software systems and other systems in which human beings and or computers communicate by means of some more or less formal rules The book contains the formal definition of CP nets and the mathematical theory behind their analysis methods However it has been the intention to write the book in such a way that it also becomes attractive to readers who are more interested in applications than the underlying mathematics This means that a large part of the book is written in a style which is closer to an engineering textbook or a users manual than it is to a typical textbook in theoretical computer science The book consists of three separate volumes The first volume defines the net model i e hierarchical CP nets and the basic concepts e g the different behavioural properties such as deadlocks fairness and home markings It gives a detailed presentation of many small examples and a brief overview of some industrial applications It introduces the formal analysis methods Finally it contains a description of a set of CPN tools which support the practical use of CP nets

Architecture and Dynamics of Meiotic Chromosomes Ricardo Benavente,Mónica Pradillo,Pedro A.

San-Segundo,2024-03-11 Meiosis is a special type of cell division that allows the generation of haploid gametes and is a key process for sexual reproduction of animals plants and fungi Haploidization requires that meiotic cells undergo a series of unique processes namely pairing synapsis recombination and segregation of homologous chromosomes This involves profound meiosis specific changes in the protein composition and architecture of homologous chromosomes as well as of the condensation and folding of chromatin that require a critical timing and regulation Despite this enormous complexity different organisms may achieve haploidization through common molecular mechanisms A major goal of this article collection is to provide an overview of how meiotic chromosomes and their components are critically involved in the mechanisms of haploidization and how dynamic protein complexes yield important structural intermediates and temporal regulation to this process We welcome submissions of original articles mini reviews and review articles dealing with the composition architecture function and regulation of meiotic chromosomes of animals plants and fungi using microscopic biochemical molecular genetic and or omic techniques
