Research on Emerging Rule-Based Languages and Technologies: Open Solutions and Approaches Giurca,

Adrian, Gasevic, Dragan, Taveter, Kuldar, 2009-05-31 This book provides a comprehensive collection of state of the art advancements in rule languages Provided by publisher *Semantic Digital Libraries* Sebastian Ryszard Kruk, Bill McDaniel, 2008-10-08 Libraries have always been an inspiration for the standards and technologies developed by semantic web activities However except for the Dublin Core specification semantic web and social networking technologies have not been widely adopted and further developed by major digital library initiatives and projects Yet semantic technologies offer a new level of flexibility interoperability and relationships for digital repositories Kruk and McDaniel present semantic web related aspects of current digital library activities and introduce their functionality they show examples ranging from general architectural descriptions to detailed usages of specific ontologies and thus stimulate the awareness of researchers engineers and potential users of those technologies Their presentation is completed by chapters on existing prototype systems such as JeromeDL BRICKS and Greenstone as well as a look into the possible future of semantic digital libraries This book is aimed at researchers and graduate students in areas like digital libraries the semantic web social networks and information retrieval This audience will benefit from detailed descriptions of both today's possibilities and also the shortcomings of applying semantic web technologies to large digital repositories of often unstructured data **Handbook of Data Quality** Shazia Sadiq, 2013-08-13 The issue of data quality is as old as data itself However the proliferation of diverse large scale and often publically available data on the Web has increased the risk of poor data quality and misleading data interpretations On the other hand data is now exposed at a much more strategic level e.g. through business intelligence systems increasing manifold the stakes involved for individuals corporations as well as government agencies There the lack of knowledge about data accuracy currency or completeness can have erroneous and even catastrophic results With these changes traditional approaches to data management in general and data quality control specifically are challenged There is an evident need to incorporate data quality considerations into the whole data cycle encompassing managerial governance as well as technical aspects Data quality experts from research and industry agree that a unified framework for data quality management should bring together organizational architectural and computational approaches Accordingly Sadiq structured this handbook in four parts Part I is on organizational solutions i.e. the development of data quality objectives for the organization and the development of strategies to establish roles processes policies and standards required to manage and ensure data quality Part II on architectural solutions covers the technology landscape required to deploy developed data quality management processes standards and policies Part III on computational solutions presents effective and efficient tools and techniques related to record linkage lineage and provenance data uncertainty and advanced integrity constraints Finally Part IV is devoted to case studies of successful data quality initiatives that highlight the various aspects of data quality in action The individual chapters present both an overview of the respective topic in terms of historical research and or practice and state of the art as well as specific techniques methodologies and frameworks developed by the individual contributors Researchers

and students of computer science information systems or business management as well as data professionals and practitioners will benefit most from this handbook by not only focusing on the various sections relevant to their research area or particular practical work but by also studying chapters that they may initially consider not to be directly relevant to them as there they will learn about new perspectives and approaches
