## **What Do You Care What Other People Think By Richard Feynman:**

**'What Do You Care What Other People Think?'** Richard P Feynman, Ralph Leighton, 2007-09-06 Richard Feynman Nobel Laureate teacher icon and genius possessed an unquenchable thirst for adventure and an unparalleled gift for telling the extraordinary stories of his life In this collection of short pieces and reminiscences he describes everything from his love of beauty to college pranks to how his father taught him to think He takes us behind the scenes of the space shuttle Challenger investigation where he dramatically revealed the cause of the disaster with a simple experiment And he tells us of how he met his beloved first wife Arlene and their brief time together before her death Sometimes intensely moving sometimes funny these writings are infused with Feynman s curiosity and passion for life Science Literacy in Primary Schools and Pre-Schools Haim Eshach, 2006-08-12 Science is more than a compilation of facts and figures although one would not know that from observing classroom lessons in science in elementary schools in many parts of the world In fact there are those who argue that science is not appropriate subject content for the early grades of elementary school There are many schools in which science is simply not present in the earliest grades Even where science is taught in the earliest grades it is often a caricature of science that is presented to the children This book offers a vigorous reasoned argument against the perspective that science doesn't belong in the early grades It goes beyond that in offering a view of science that is both appropriate to the early grades and faithful to the nature of the scientific enterprise Dr Eshach is not a voice in the chorus that claims young children's developmental lack of readiness for such study He believes as do I that in order to learn science one must do science At the heart of the doing of science is the act of exploration and theory formation To do science we must explore the ways in which the world around us looks sounds smells feels and behaves THUS SPOKE EINSTEIN on LIFE and LIVING V. **The Autobiography of Light** George Grammatikakis, 2024-08-01 This book brings to life one of the most fundamental entities in the universe the electromagnetic waves that we perceive as light With his gift for narrative the author explains the nature of light and the long history of its influence on human ideas technology and culture From early efforts to understand vision and colours through relativity and quantum theory visual art and laser technology to the birth of stars and attempts to photograph their end readers will come to appreciate the central role of light not only in human history but also in the history of the cosmos This grand tour ends in a flourish with an epilogue written in the first person by the protagonist itself a true Autobiography of Light All chapters in the book are relatively self contained allowing readers to dip freely in and out What makes this captivating story so original is the effort made to point out the affinity between the study of light and achievements in the realm of culture Weird Scientists □ the Creators of Quantum Physics Jeffrey Strickland, 2011-09-04 Weird Scientists is a sequel to Men of Manhattan As I wrote the latter about the nuclear physicists who brought in the era of

nuclear power quantum mechanics or quantum physics was unavoidable Many of the contributors to the science of splitting the atom were also contributors to quantum mechanics Atomic physics particle physics quantum physics and even relativity are all interrelated This book is about the men and women who established the science that shook the foundations of classical physics removed determinism from measurement and created alternative worlds of reality The book introduces fundamental concepts of quantum mechanics roughly in the order they were discovered as a launching point for describing the scientist and the work that brought forth the concepts

**Encyclopedia of Science and Technology Communication**

Susanna Hornig Priest, 2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science

communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics
