The Interface Between Innate and Acquired Immunity M.D. Cooper,H. Koprowski,2013-03-09 All multicellular organisms may possess innate immunity mediated by defense mechanisms with which the organism is born In recent years much has been learned about the diversity of innate immune mechanisms A large array of naturally produced antimicrobial peptides has been de fined A variety of cell surface receptors that recognize common patterns displayed by infectious organisms have been identified along with the intracellular pathways that these receptors use to activate cellular defense functions Cell surface receptors on natural killer NK cells have been shown to sense microbial invasion in neighboring cells thereby setting into motion their elimination by cy tototoxic mechanisms Other receptors have been found to facilitate phagocytosis and intracellular killing of microbes by phagocytic cells These and other natural defense mechanisms have traditionally been viewed as the first line of body defense in vertebrate species that also possess the capacity for acquired or adaptive immunity Sharks and all of the other jawed vertebrates generate large repertoires of T and B lymphocyte clones that display different antigen specific receptors in the form of T cell receptors TCR and immunoglobulins Ig that allow them to recognize and respond to antigens in collaboration with antigen present ing cells Memory T and B cells are then generated to allow faster and heightened cellular and humoral immune re sponses on secondary antigen encounter In recent years it has also become obvious that innate immune responses can directly influence adaptive immune responses in ways that will enhance body defense

Immune regulation at the fetal?maternal interface with focus on decidual macrophages Judit Svensson?Arvelund,2015-04-21 A successful pregnancy requires that the maternal immune system adapts to tolerate the semi allogeneic fetal placental unit This adaptation mainly occurs locally i e at the fetal maternal interface where fetal derived tissues come into close contact with maternal cells in the uterine endometrium called decidua during pregnancy Macrophages and regulatory T Treg cells are maternal immune cells that are enriched in the decidua and they likely play a central role in promoting fetal tolerance However the precise function of decidual macrophages and the factors regulating both macrophages and Treg cells in humans are unknown The aim of this thesis was to characterize the phenotype and function of decidual macrophages from first trimester human pregnancy and to identify factors responsible for inducing tolerogenic properties in both decidual macrophages and Treg cells CD14 decidual macrophages showed characteristics of immune suppressive or homeostatic macrophages expression of CD163 CD206 and CD209 mainly produced immunosuppressive cytokines like IL 10 and IL 35 while levels of inflammatory cytokines for instance IL 12 and IL 23 were low Decidual macrophages also induced the expansion of CD25^{high} Foxp3⁺ Treg cells but not of Th1 Th2 and Th17 cells in vitro In addition decidual macrophages preferentially secreted the monocyte and Treg cell associated chemokines CCL2 and CCL18 while Th1 Th2 and Th17 related chemokines were produced at low levels These results suggest that decidual macrophages contribute to create the unique decidual cell composition and a tolerogenic immune environment that is compatible with fetal development Further by comparing decidual macrophages with different in vitro macrophage subsets we showed that M-CSF and IL 10 but not GM-CSF Th1 or Th2 stimuli induced macrophages that resemble decidual macrophages in terms of cell surface marker expression cytokine and chemokine production and gene expression profile First trimester placental tissue in particular placental trophoblast cells was identified as an important source of M-CSF and IL 10 We also demonstrated that human fetal derived placental tissue can induce the characteristics of

decidual macrophages CD163 CD206 CD209 IL 10 CCL18 and the selective expansion of functionally suppressive CD25^{high} Foxp3 Treg cells the latter partly mediated through IL 10 TGF and TRAIL The placenta also limited activation of Th cells for instance by generally reduced cytokine production Our data show that the placenta has a unique ability to induce tolerogenic immune cells with a reduced inflammatory potential which is essential for maintaining tissue integrity and preventing inflammation induced fetal loss

Glycans: Molecules at the Interface of Immunity and Disease Shoib Sarwar Siddiqui, Raghavendra Kikkeri Venkatanarayan, Stevan Springer, 2024-01-17 Glycans are complex multi unit carbohydrate structures that cover the surfaces of cells and guide cellular interactions Glycobiology studies the synthesis structure function regulation and evolution of glycans and glycan binding molecules Glycans are synthesized and added as modifications to proteins lipids and RNA Though they are often associated with functions outside of cells glycoproteins and glycolipids are most often extracellular or secreted glycans are also active within cells Glycans are known to have diverse physiological roles ranging from cell adhesion maintaining tissue structure and integrity to molecular recognition marking position during development or self identity in immunity and reproduction Glycans also regulate cellular activity and physiological state The families of proteins that bind glycans are called lectins Glycans and lectins are vital in many diseases such as cancer neurodegeneration inflammation allergies asthma and autoimmune disorders

Interfaces Between Nanomaterials and Microbes Munishwar Nath Gupta, Sunil Kumar Khare, Rajeshwari Sinha, 2021-06-23 Nanomaterials are becoming ubiquitous microbes similarly are everywhere This book focuses on various ways the diverse nanomaterials interact with microbial communities and implications of such interactions Both toxicity and beneficial effects of nanomaterial microbe interactions have been covered This includes areas such as fate and bioavailability of nanomaterials in environments microbial synthesis of nanomaterials and antimicrobial action of nanomaterials Fairly comprehensive but with narrow focus the book provides useful insights into these interactions which need to be factored in while designing nanoscience based new technologies

Vascular Inflammation in Systemic Autoimmunity Giuseppe A. Ramirez, Cornelia Weyand, Augusto Vaglio, Angelo A.

Manfredi, 2017-01-16 Plasticity and dynamism characterize the immune system as a tissue integrating network with defensive functions Blood and lymphatic vessel trees constitute the most evident and intuitive physical platform for the development of the net of interactions between immune cells body tissues and foreign agents Moreover vessel repair and immune patrolling are intimately linked physiological functions with common evolutionary roots Not surprisingly variable degrees of vascular inflammation are often detectable in the setting of systemic inflammation and autoimmunity whereas research in the field of cardiovascular pathology is progressively converging towards the identification of a common inflammatory background The definition of the role of vascular inflammation in causing sustaining and or predicting the development of systemic autoimmunity constitute a challenging unexplored frontier towards the development of a new generation of treatments and a better patient care
