ENVIRONMENTAL CRIME TRIALS Steven C. Drielak, 2017-06-21 Obtaining an environmental crime conviction can be a daunting task for any prosecutor There are many challenges to be met and overcome all of which may impact upon the success or failure of the criminal environmental prosecution This text s focus is primarily on those issues associated with the collection and analysis of scientific evidence and other types of physical evidence that are normally associated with an environmental crime trial Specifically the book examines the environmental crime scene evidence collection issues normally associated with criminal prosecutions involving hazardous wastes and hazardous substances and their subsequent release to the environment The myriad of evidence collection and analysis issues raised here focus on the equipment procedures protocols training and documentation required in order to properly collect this unique type of criminal evidence Additionally

the text provides a detailed description of the documentation that should be requested for examination by defense experts prior to the commencement of an environmental criminal trial and provides complete explanations as to their evidentiary and potentially exculpatory significance. The text will also provide the environmental defense attorney with viable alternatives to the all too common environmental scientific evidence stipulations and also provides a detailed analysis of the commonly self induced vulnerabilities found in many criminal environmental prosecutions involving hazardous wastes and substances. The book also includes numerous and specific cross examination questions and follow up questions for the government's technical witnesses questions that in many instances the prosecution would rather have left unasked. Armed with the knowledge provided here the environmental crimes prosecutor will be able to provide initial guidance to the investigative team that may minimize or eliminate many errors often made during the early evidence collection stage of a criminal environmental investigation. For the defense attorney the book provides a consequence analysis of the potential criminal evidence collection errors committed by regulatory trained individuals and contractors who have little or no criminal evidence collection or crime scene investigation training.

A Guide to Compliance for Process Safety Management/Risk Management Planning (PSM/RMP) Frank R. Spellman, 1998-06-03 Establishing maintaining and refining a comprehensive Process Safety Management PSM and Risk Management Program RMP is a daunting task. The regulations are complicated and difficult to understand. The resources available to manage your program are limited. Your plant could be the target of a grueling PSM and RMP compliance audit by OSHA and or the EPA which could scrutinize your facility according to their stringent audit guidelines. Ask yourself some questions: Is your municipal plant or industrial facility ready to meet new OSHA and EPA PSM RMP regulations? Do you understand OSHA's and EPA's requirements? Do you know how OSHA EPA are interpreting PSM RMP requirements? Are you prepared for a possible audit? Is your existing PSM RMP comprehensive maintainable and cost effective? If you answered no to any of these you need the expert guidance provided by A Guide to Compliance for Process Safety Management Risk Management Planning PSM RMP. In recent years chemical accidents that involved the release of toxic substances have claimed the lives of hundreds of employees and thousands of others worldwide. In order to prevent repeat occurrences of catastrophic chemical incidents OSHA and the USEPA have joined forces to bring about the OSHA Process Safety Management Standard PSM and the USEPA Risk Management Program RMP. Chemical disaster situations can occur due to human error in system operation and or a malfunction in system equipment. Other emergency situations that must also be considered and planned for include fire floods hurricanes earthquakes tornadoes snow ice storms avalanches explosions truck accidents train derailments airplane crashes building collapses riots bomb threats terrorism and sabotage. Be prepared. Determine the differences and similarities between OSHA's PSM and EPA's RMP.
