Reflections on Naturalism José Ignacio Galparsoro, Alberto Cordero, 2013-09-04 To naturalists there is no such thing as complete justification for any claim and so requiring complete warrant for naturalist proposals is an unreasonable request The proper guideline for naturalist proposals seems thus clear develop it using the methods of science if this leads to a fruitful stance then explicate and reassess The resulting offer will exhibit virtuous circularity if its explanatory feedback loop involves critical reassessment as the explanations it encompasses play out So viewed naturalism is a philosophical perspective that seeks to unite in a virtuous circle the natural sciences and non foundationalist broadly based empiricism Other common lines of antinaturalist complaint are that naturalization efforts seem fruitful only in some areas also that several endeavors outside the sciences serve as sources of knowledge into human life and the human condition especially in areas where science does not reach terribly far as yet It seems hard not to grant some truth to many allegories from literature art and some religions Naturalism has room for knowledge gathered outside science provided the imported claims satisfy also by naturalistic methods Naturalism and the debate about its scope and limits thrive on discrepancy We hope that collectively the selected essays that follow will give a fair view of the vitality and tribulations of naturalism as a variegated contemporary philosophical perspective

Explanation Beyond Causation Alexander Reutlinger, Juha Saatsi, 2018 Explanations are important to us in many contexts in science mathematics philosophy and also in everyday and juridical contexts But what is an explanation In the philosophical study of

explanation there is long standing influential tradition that links explanation intimately to causation we often explain by providing accurate information about the causes of the phenomenon to be explained Such causal accounts have been the received view of the nature of explanation particularly in philosophy of science since the 1980s However philosophers have recently begun to break with this causal tradition by shifting their focus to kinds of explanation that do not turn on causal information The increasing recognition of the importance of such non causal explanations in the sciences and elsewhere raises pressing questions for philosophers of explanation What is the nature of non causal explanations and which theory best captures it How do non causal explanations relate to causal ones How are non causal explanations in the sciences related to those in mathematics and metaphysics This volume of new essays explores answers to these and other questions at the heart of contemporary philosophy of explanation The essays address these questions from a variety of perspectives including general accounts of non causal and causal explanations as well as a wide range of detailed case studies of non causal explanations from the sciences mathematics and metaphysics
