

HOW DO PLANES FLY?

We all know that birds fly by flapping their wings and superman uses his superpowers to fly, but have you ever wondered how planes fly? Planes fly through a combination of gaining lift from their wings and forward thrust from their engines.

The wings of an aeroplane are curved so that the upper (top) surface of the wing is longer than the bottom surface which makes air go faster over the top surface than the bottom. This creates upward pressure on the wings from below causing the wings to lift. The thrust from the engines makes the plane go forward, and the greater this thrust is the faster the plane will go and the larger the force will be on the wings pushing them upwards.

The pilot can change the thrust from the engines and the angle of the wings to get the aircraft to ascend (go up) or to descend (go down).

When a plane is flying there are four main forces pulling on it: thrust, drag, gravity and lift. The force of the lift needs to be larger than the force of the gravity to keep the plane in the air. The thrust from the engines need to be larger than the drag from the air to keep it going forward.

Which surface of the wing is longer (top surface or bottom surface) _____

Name the four main forces which act on a plane _____

How does a plane ascend or descend? _____

What do you think needs to be changed in bigger planes so they can still fly? _____
