## HOW TO USE JUMPER CABLES AND A BOOSTER BATTERY

1. Check the condition of the battery. The battery should be fully charged. If the battery is not fully charged, it will not be able to provide enough power to start the engine. Check the battery voltage. The battery voltage should be at least 12.6 volts. If the battery voltage is lower than 12.6 volts, the battery is not fully charged.

2. Check the condition of the jumper cables. The jumper cables should be in good condition. They should not be frayed, damaged, or have any loose connections. Check the jumper cables for any signs of wear or damage. If the jumper cables are damaged, they should be replaced.

3. Connect the jumper cables to the booster battery. The positive terminal of the booster battery should be connected to the positive terminal of the storage battery. The negative terminal of the booster battery should be connected to the negative terminal of the storage battery. Make sure the connections are secure. Do not touch the jumper cables or the battery terminals while the engine is running.

4. Start the engine. Once the jumper cables are connected, the engine should start. If the engine does not start, check the battery voltage and the jumper cable connections. If the battery voltage is still low, the battery may be dead. If the jumper cable connections are not secure, they should be reconnected. If the engine still does not start, the battery may be bad and should be replaced.
