subconscious is the part of the mind that is not currently in focal awareness Sigmund Freud used the term subconscious in 1893 to describe associations and impulses that are not accessible to consciousness He later abandoned the term in favor of unconscious noting the following If someone talks of subconsciousness I cannot tell whether he means the term topographically to indicate something lying in the mind beneath consciousness or qualitatively to indicate another

consciousness a subterranean one as it were He is probably not clear about any of it The only trustworthy antithesis is between conscious and unconscious In 1896 in Letter 52 Freud introduced the stratification of mental processes noting that memory traces are occasionally re arranged in accordance with new circumstances In this theory he differentiated between Wahrnehmungszeichen Indication of perception Unbewusstsein the unconscious and Vorbewusstsein the Preconscious From this point forward Freud no longer used the term subconscious because in his opinion it failed to differentiate whether content and the processing occurred in the unconscious or preconscious mind
