Improvement of Oil-seed and Industrial Crops by Induced Mutations ; Proceedings Vienna Advisory Group Meeting on the Use of Induced Mutations for the Improvement of Oil-Seed and other Industrial Crops (17-21 November, 1980), 1982 *Improvement of Oil-seed and Industrial Crops by Induced Mutations*, 1982 World production and needs of oil seeds and vegetable oils Plant breeding and management their role in modifying the availability and composition of certain vegetable oils and fats Status of breeding and prospects for mutation breeding in peanuts sesame and castor beans Achievements and prospects of sunflower genetics breeding and induced mutation utilization Safflower genetics and breeding Status and aspects of rapeseed breeding Aspects of olive tree breeding Mycotoxins in oil seed and other crops Seed oils as renewable resource for industrial use Cuphea the first annual oil crop for the production of medium chain triglycerides MCT Variation of chemical composition of cotton seeds with respect to species picking time and location Control of cotton stickiness through breeding cultivars resistant to whitefly Bemisia tabaci Gene Orientations recent developments in amelioration genetic du cotonnier Jute breeding in Bangladesh Natural and induced genetic variation in the biosynthesis of alkaloids and other secondary metabolites Quality aspects of oil crop raw materials in relation to their use extraction and processing Improvement of oil seeds from an industrial point of view non edible use An introduction to biomass concepts for plant breeders Biomass production a plant breeder's view Safflower breeding and its prospects in India Current breeding programme on industrial crops in Indonesia New varieties bred by mutation breeding in oil seed and industrial crops

Improvement of Oil-seed and Industrial Crops by Induced Mutations International Atomic Energy Agency, Food and Agriculture Organization of the United Nations, 1982 *Improvement of Oil-seed and Industrial Crops by Induced Mutations*, 1982 **Biochemical Aspects of Crop Improvement** K. R. Khanna, 2024-12-06 This book provides a comprehensive review at the biochemical and molecular level of the processes and techniques that contribute to crop improvement General topics include a historical perspective of the advancements in crop improvement cultivar systematics and biochemical and molecular markers in crop improvement programs the genetics of physiological and biochemical processes affecting crop yield the genetics of photosynthesis chloroplast relevant enzymes and mutations osmoregulation adjustment and the production of protective compounds in relation to drought tolerance and the biochemistry of disease resistance including elicitors defense response genes their role in the production of phytoalexins and other strategies against pathogens Other topics include quality breeding e.g. molecular gene structure changing individual amino acids enhancing nutritive value of proteins and biotechnology genetic engineering Geneticists biochemists botanists agricultural specialists and others involved in crop improvement and breeding should consider this volume essential reading Industrial Crops Improvement Nitish Kumar, 2025-01-24 This book explores the different conventional and biotechnological techniques for enhancing the productivity of industrial crops The growth of the industrial crop sector has become a widespread global

phenomenon that helps rural livelihoods and propels economic development Contrary to staple crops industrial crops are cultivated with the intention of being sold for a high profit Industrial crops are a crucial component of plans to increase food security because they offer the required stability during periods of economic or climatic crises In order to maintain their livelihood and food security many farm households balance the advantages and disadvantages of producing food crops and industrial crops Avoiding land use rivalry with crops grown for food and feed production is crucial when considering growing industrial crops on agricultural soils The past several years have seen a rise in the awareness of scholars and decision makers regarding the immediate and long term effects of climatic variables on economic food security social and political results In order to sustain food production with more climate resilient crops for future generations genetic variety both natural and artificial is crucial Therefore addressing the problem of finding a compromise between increasing crop production under a specific set of conditions and reducing the chance of crop failure when conditions change is important and difficult An assortment of meteorological conditions is used to grow industrial crops Many are subsistence farmers who run extremely tiny farms with very little agricultural input to produce products that can be sold It is a significant problem to preserve the variety of these crops and handle all crop culture related difficulties By offering the knowledge required to minimize the dangers of industrial crop breeding through managing genetic diversity the author believe that this book will primarily address a need that has not yet been met in this and other grower groups

Induced Mutation Breeding Subodh Kumar Datta,2023-05-24 The book is an excellent reference collection of the research conducted by different workers on induced mutagenesis worldwide for more than 80 years One can get almost all mutation breeding references at one place The book gives a coherent and concise account of all the important and relevant aspects related to induced mutagenesis with an emphasis on recent developments in the field of crop improvement The references have been arranged crop wise and important topic wise which deal with not only classical mutation breeding but also spontaneous mutations somaclonal variations nanoparticles and relevant modern aspects The book highlights 22 chapters covering holistic information on almost all important components such as radiosensitivity chromosomal and morphological abnormalities detection of mutation management of chimera present status of mutation etc of Mutation Breeding Chapters are very informative and one can follow the references on crop and aspect basis since the start of mutation breeding work This book is an excellent resource for researchers and students for understanding proper applications of induced mutations in crop improvement and biological research It is of interest and useful to graduate and postgraduate students horticulturists floriculturists agricultural scientists and breeders related to crop improvement program

Somaclonal Variation and Induced Mutations in Crop Improvement S.M. Jain,D.S. Brar,B.S. Ahloowalia,2013-03-14 Genetic variability is an important

parameter for plant breeders in any conventional crop improvement programme. Very often the desired variation is unavailable in the right combination or simply does not exist at all. However, plant breeders have successfully recombined the desired genes from cultivated crop germplasm and related wild species by sexual hybridization and have been able to develop new cultivars with desirable agronomic traits such as high yield, disease, pest and drought resistance. So far, conventional breeding methods have managed to feed the world's ever-growing population. Continued population growth, no further scope of expanding arable land, soil degradation, environmental pollution and global warming are causes of concern to plant biologists and planners. Plant breeders are under continuous pressure to improve and develop new cultivars for sustainable food production. However, it takes several years to develop a new cultivar. Therefore, they have to look for new technologies which could be combined with conventional methods to create more genetic variability and reduce the time in developing new cultivars with early maturity and improved yield. The first report on induced mutation of a gene by H.J. Muller in 1927 was a major milestone in enhancing variation and also indicated the potential applications of mutagenesis in plant improvement. Radiation sources such as X-rays, gamma rays and fast neutrons and chemical mutagens e.g. ethyl methane sulphonate have been widely used to induce mutations.

Applied Mutation Breeding for Vegetatively Propagated Crops C. Broertjes, A.M. van Harten, 2013-10-22. When the first edition of this book appeared in 1978 it was warmly received. Most readers and reviewers especially valued the extensive coverage of the literature in the chapters dealing with the different crops, a valuable and timely addition to plant breeders and of outstanding value to breeders of ornamental plants. The book's special strength resides in the extensive review of literature. *International Journal for Breeding Research*. This is also reflected by the many times that the work has been referred to in other publications. This new edition provides plant breeders as well as scientists with an up-to-date overview of methods and results of the application of mutation breeding in order to genetically improve vegetatively propagated crops. General principles and background information about mutation breeding in general, methods of treatment, material to be treated and results are discussed in the introductory chapters, followed by a description of the specific situation in each of the vegetatively propagated crops ever used in a mutation breeding project. This volume brings together all the important and relevant literature in the field. It provides a complete account of mutation breeding of vegetatively produced crops, presenting conclusions about the value of the method, its possibilities, limitations and shortcomings and the possible difficulties of further

application in various crops The initial chapters deal with the interactions between mutagenic treatment and plant material such as aspects of mutagenic treatment post irradiation behaviour of shoot apices and adventitious bud techniques All available literature is then discussed crop by crop and critically evaluated Almost 1700 references are covered and whenever possible suggestions for more efficient application of mutation breeding methods are given
